CONTENT SELECTION

Which features of an object should I mention?

Gatt et al. 2011

Gatt et al. 2011

The Cooperative Principle

Grice 1975

“Make your conversational contribution such as is required, at the stage at which it occurs, by the accepted purpose or direction of the talk exchange in which you are engaged.”

- Quantity-1:** Make your contribution as informative as required.
- Quantity-2:** Don’t make your contribution more informative than necessary.
- Manner:** Be brief and orderly; avoid ambiguity and obscurity.

Overinformative referring expressions — color/size asymmetry

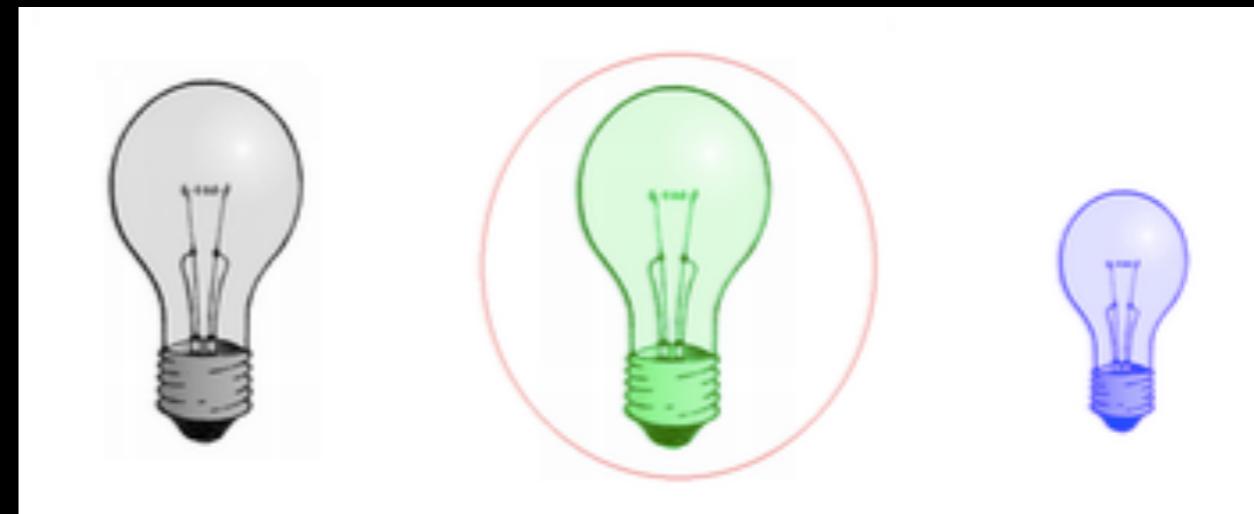

size sufficient

the big lightbulb

75-80% ***the big green lightbulb*** **8-10%**

color sufficient

the green lightbulb

Overinformative referring expressions — color/size asymmetry

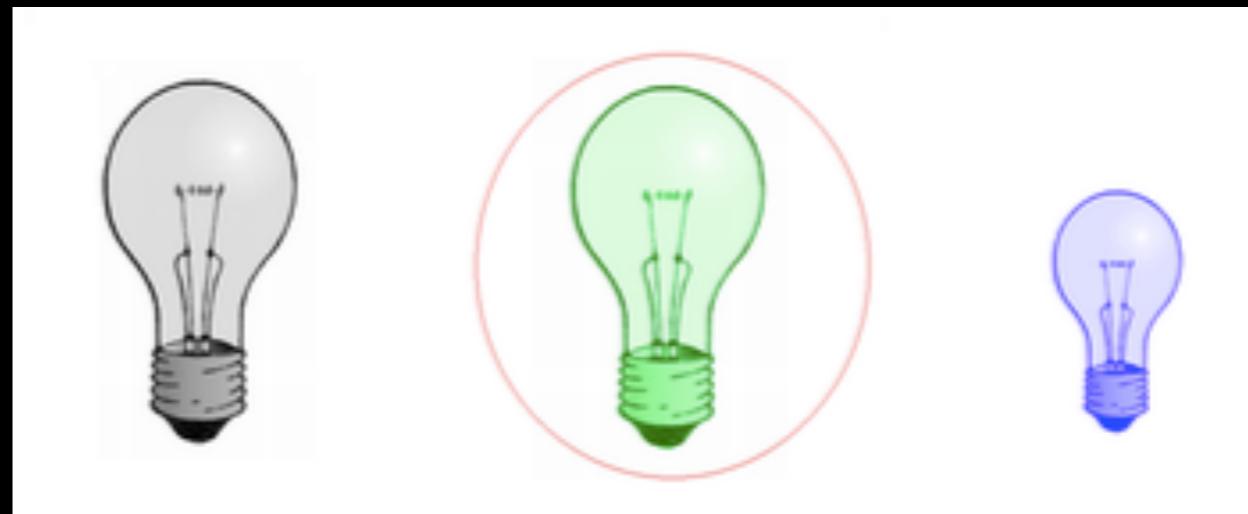

size sufficient

the big lightbulb

75-80% *the big green lightbulb* 8-10%

color sufficient

the green lightbulb

1. speakers produce overinformative referring expressions
2. more overinformative color than size mentions

Overinformative referring expressions — color/size asymmetry

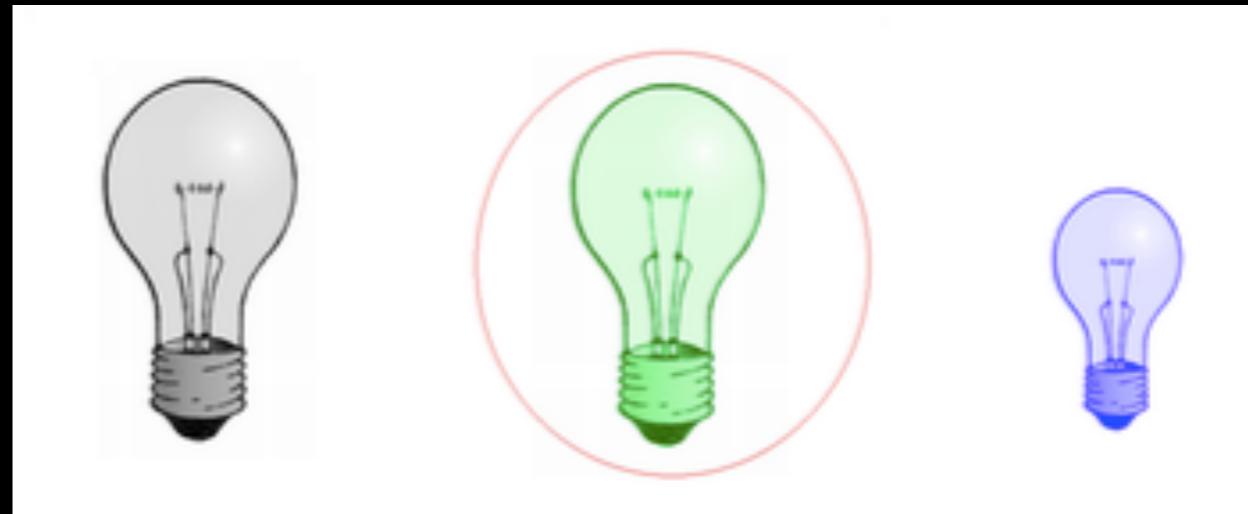

size sufficient

the big lightbulb

75-80% ***the big green lightbulb*** 8-10%

color sufficient

the green lightbulb

1. speakers produce overinformative referring expressions
2. more overinformative color than size mentions

OVERINFORMATIVENESS

Deutsch 1976; Pechmann 1989; Sedivy 2003; Gatt et al. 2011; many others

Outline

- I. Overinformativeness asymmetry for color and size modifiers
- II. Typicality effects in overinformative referring expressions

Outline

$$C(u) = C(u_1) + C(u_2)$$

Utterance semantics & cost

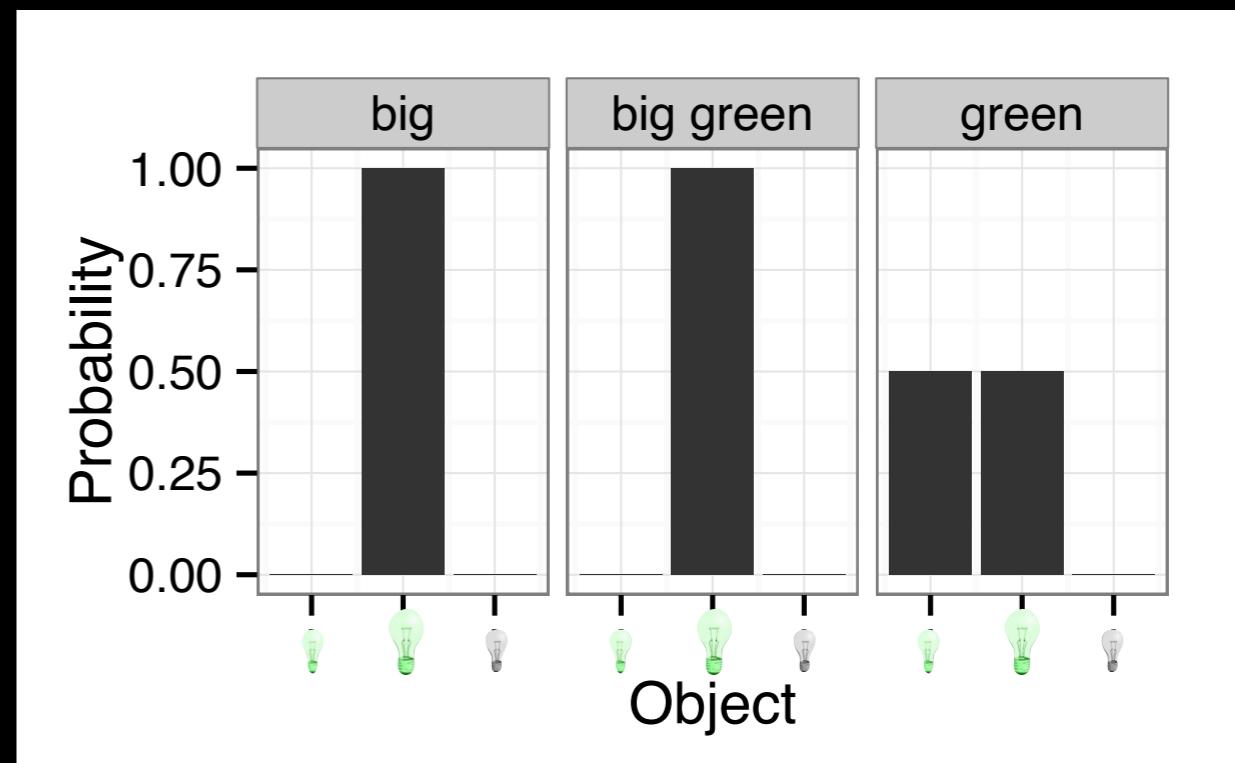

Intersective semantics

$$[[u]] = [[u_1]] \wedge [[u_2]]$$

$$[[\text{big green}]] = [[\text{big}]] \wedge [[\text{green}]]$$

Cost

$$C(u) = C(u_1) + C(u_2)$$

RSA will not produce overinformative REs...

Gatt et al 2013; Westerbeek et al 2015

Utterance semantics & cost

Intersective semantics

$$[[u]] = [[u_1]] \wedge [[u_2]]$$

$$[[\text{big green}]] = [[\text{big}]] \wedge [[\text{green}]]$$

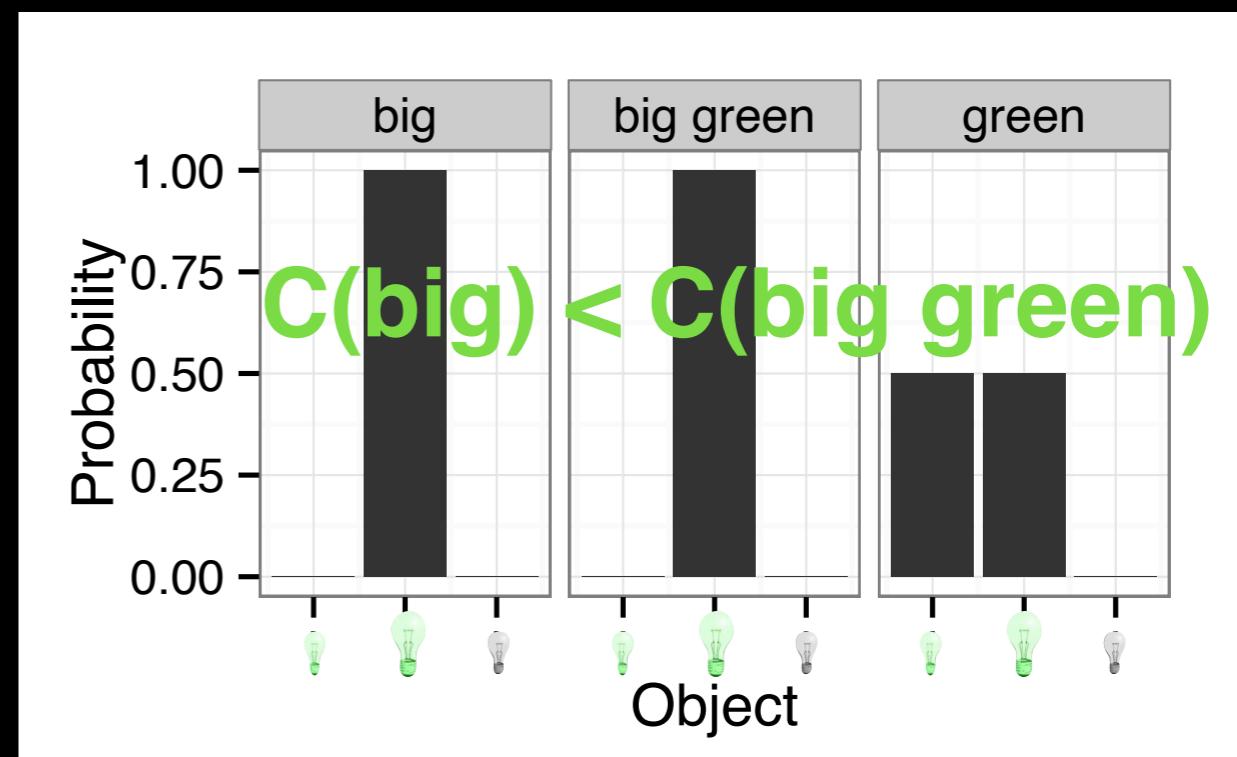

Cost

$$C(u) = C(u_1) + C(u_2)$$

RSA will not produce overinformative REs...

Gatt et al 2013; Westerbeek et al 2015

...with deterministic semantics

Motivation for non-deterministic semantics?

Modifiers differ:

size adjectives are vague and context-dependent
in a way that color adjectives are not

Kennedy & McNally 2005

color is intrinsically salient in a way that size is not

Arts et al 2011; Gatt et al 2013

size adjectives are judged to be more subjective
than color adjectives

Scontras, Degen, & Goodman in press

Non-deterministic semantics

Literal listener

$$P_{L_0}(o|u) \propto \begin{cases} 1 - \epsilon & [[u]](o) = \text{true} \\ \epsilon & \text{otherwise} \end{cases}$$

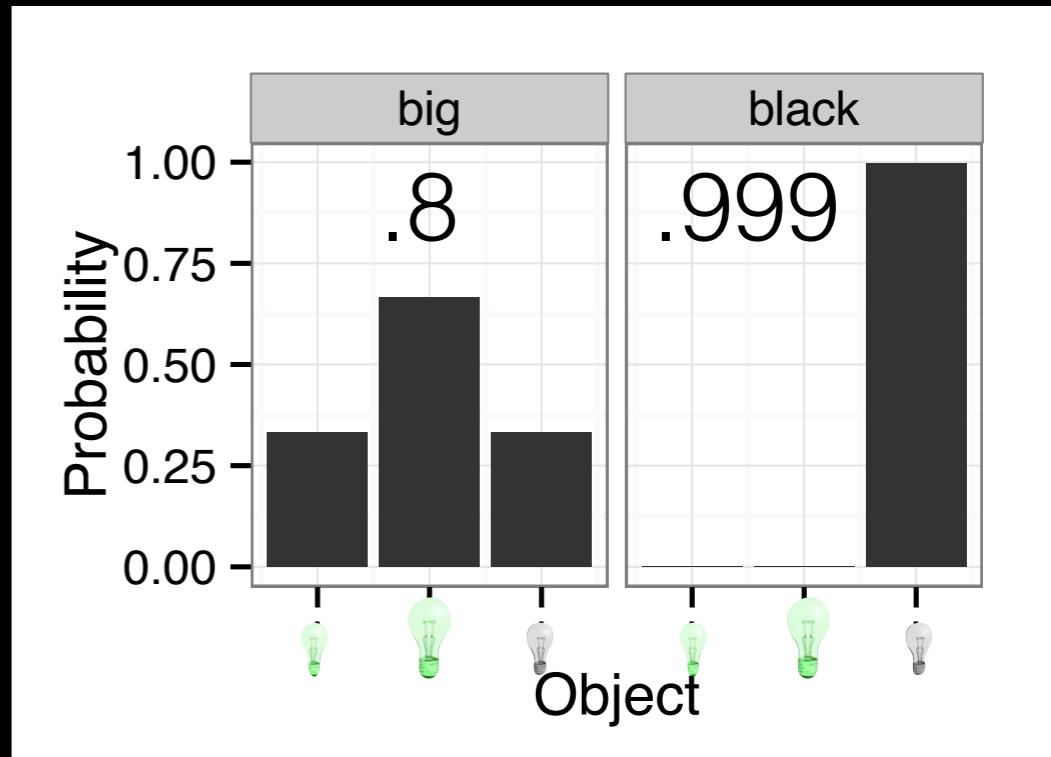

Non-deterministic semantics

Literal listener  **fidelity**

$$P_{L_0}(o|u) \propto \begin{cases} 1 - \epsilon & [[u]](o) = \text{true} \\ \epsilon & \text{otherwise} \end{cases}$$

Non-deterministic semantics

Literal listener  **fidelity**

$$P_{L_0}(o|u) \propto \begin{cases} 1 - \epsilon & [[u]](o) = \text{true} \\ \epsilon & \text{otherwise} \end{cases}$$

Non-deterministic semantics

Literal listener  **fidelity**

$$P_{L_0}(o|u) \propto \begin{cases} 1 - \epsilon & [[u]](o) = \text{true} \\ \epsilon & \text{otherwise} \end{cases}$$

Pragmatic speaker

$$P_{S_1}(u|o) \propto e^{\lambda \cdot (\ln P_{L_0}(o|u) - C(u))}$$

Non-deterministic semantics

Literal listener  **fidelity**

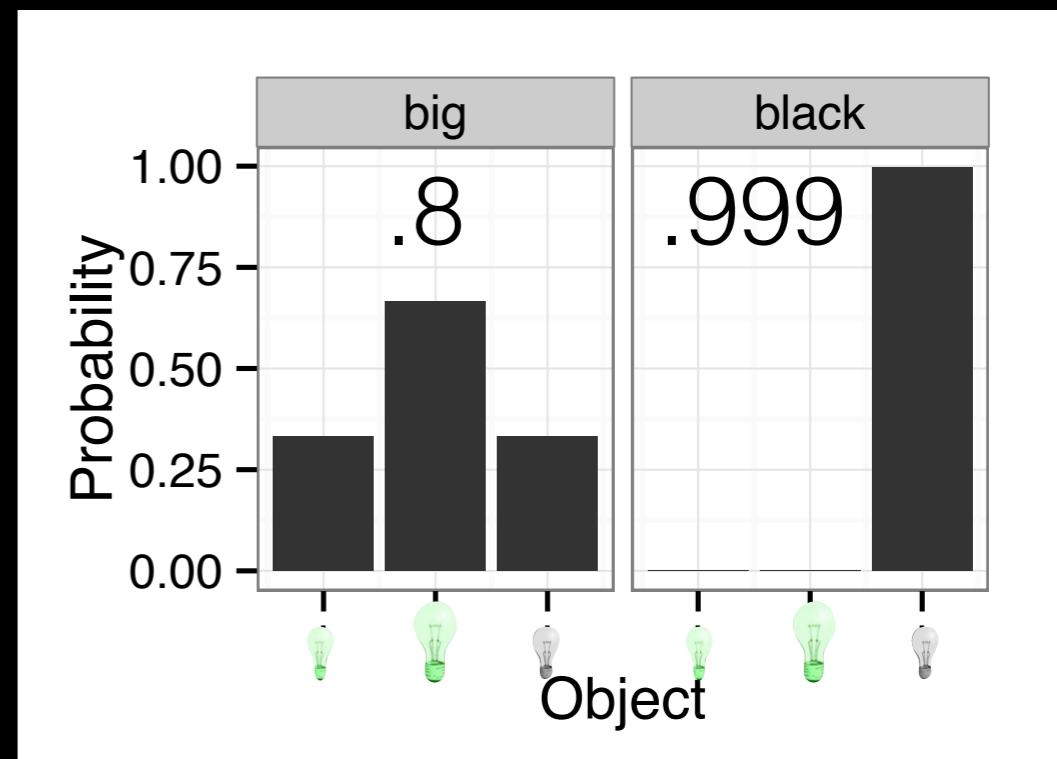

$$P_{L_0}(o|u) \propto \begin{cases} 1 - \epsilon & [[u]](o) = \text{true} \\ \epsilon & \text{otherwise} \end{cases}$$

Pragmatic speaker

$$P_{S_1}(u|o) \propto e^{\lambda \cdot (\ln P_{L_0}(o|u) - C(u))}$$

Two free fidelity parameters:

$\text{fid}(\text{size})$ $\text{fid}(\text{color})$

Non-deterministic semantics

Literal listener 

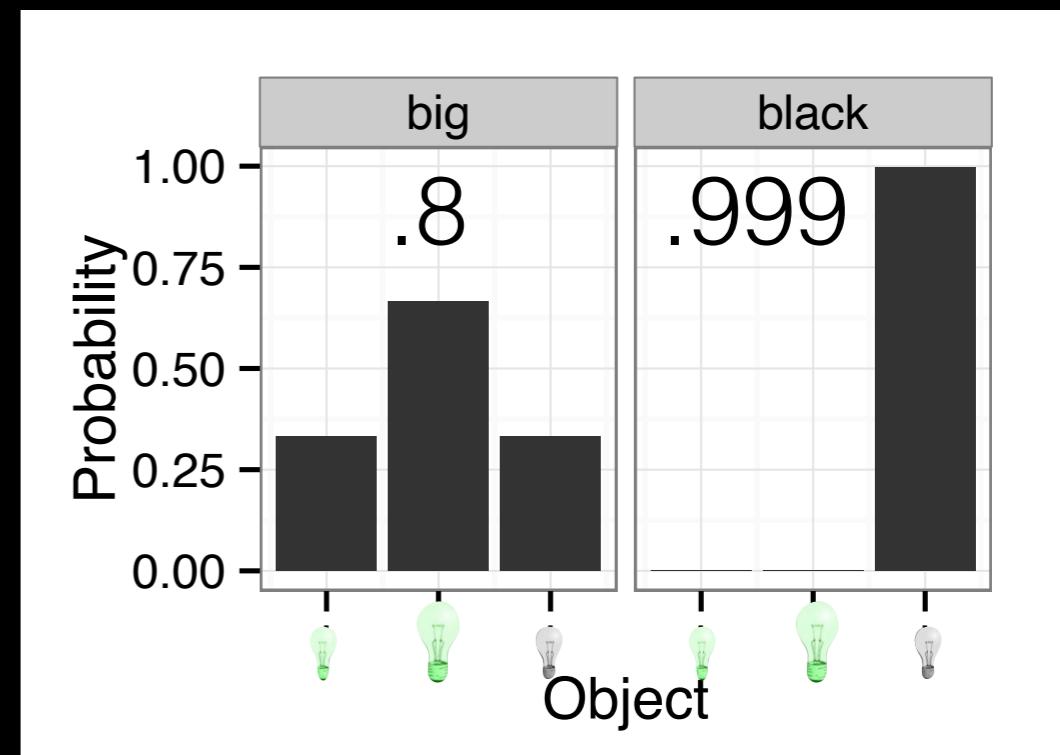

$$P_{L_0}(o|u) \propto \begin{cases} 1 - \epsilon & [[u]](o) = \text{true} \\ \epsilon & \text{otherwise} \end{cases}$$

Pragmatic speaker

$$P_{S_1}(u|o) \propto e^{\lambda \cdot (\ln P_{L_0}(o|u) - C(u))}$$

Two free fidelity parameters:
fid(*size*) fid(*color*)

Two free cost parameters:
 $C(\text{size})$ $C(\text{color})$

Non-deterministic semantics

Literal listener

$$P_{L_0}(o|u) \propto \begin{cases} 1 - \epsilon & [[u]](o) = \text{true} \\ \epsilon & \text{otherwise} \end{cases}$$

fidelity

Pragmatic speaker

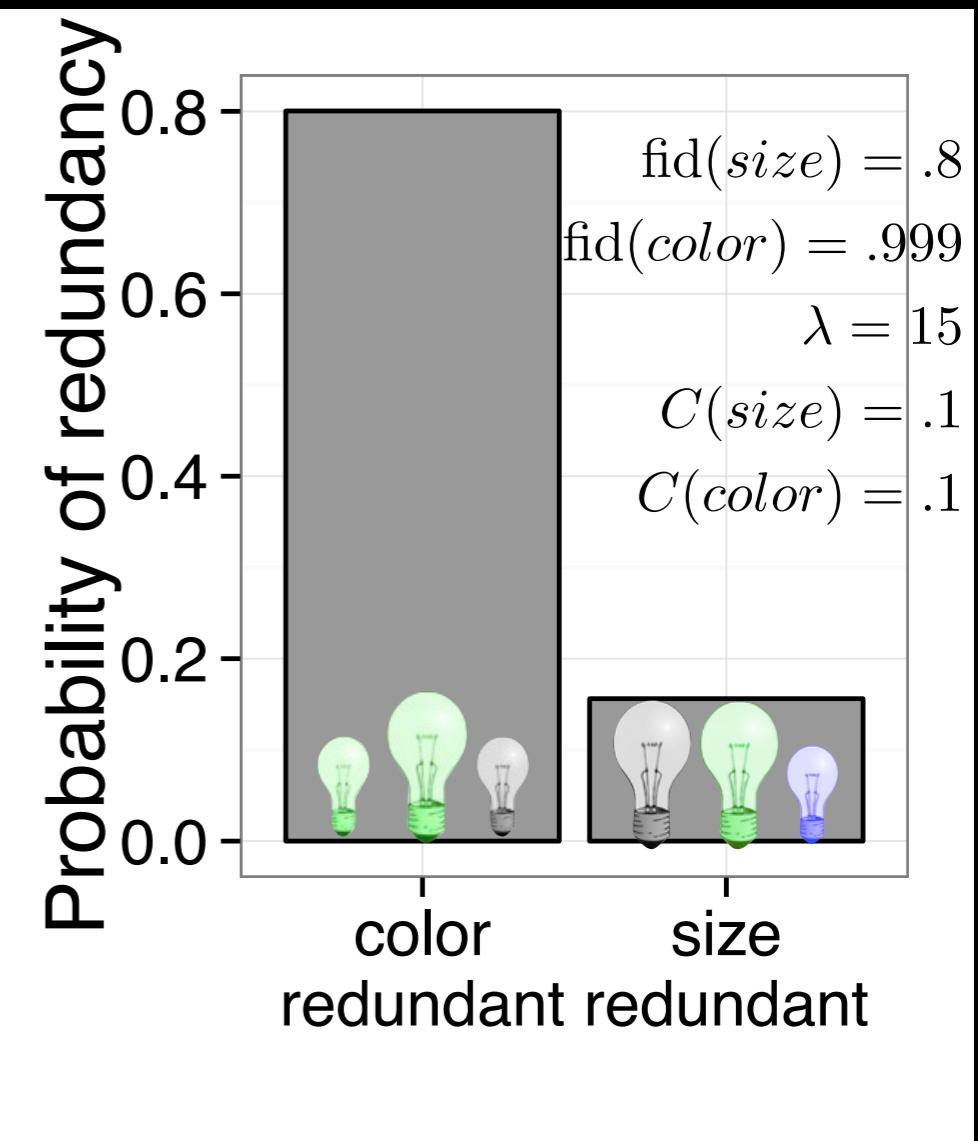

$$P_{S_1}(u|o) \propto e^{\lambda \cdot (\ln P_{L_0}(o|u) - C(u))}$$

Two free fidelity parameters:

$\text{fid}(\text{size})$ $\text{fid}(\text{color})$

Two free cost parameters:

$C(\text{size})$ $C(\text{color})$

Non-deterministic semantics

Literal listener

$$P_{L_0}(o|u) \propto \begin{cases} 1 - \epsilon & [[u]](o) = \text{true} \\ \epsilon & \text{otherwise} \end{cases}$$

fidelity

Pragmatic speaker

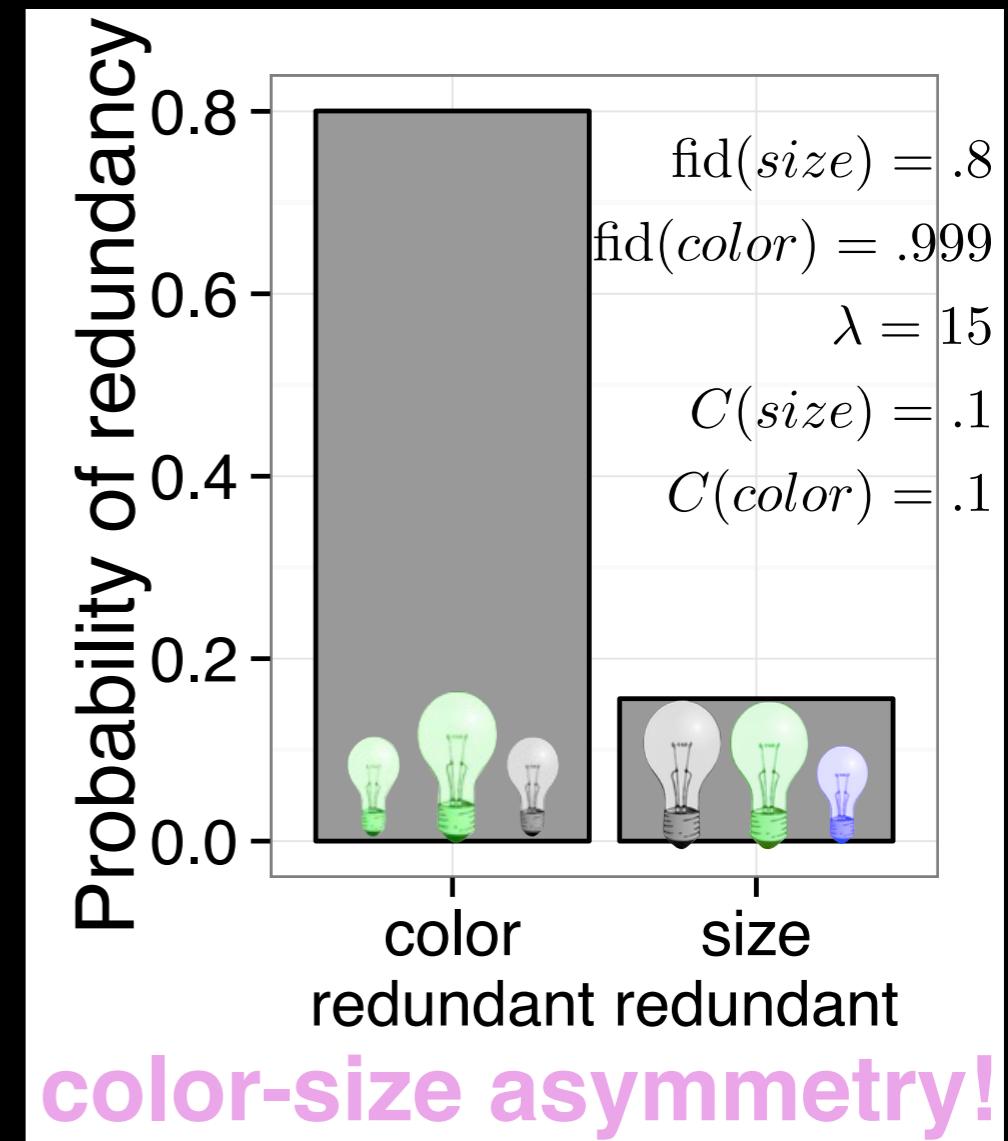

$$P_{S_1}(u|o) \propto e^{\lambda \cdot (\ln P_{L_0}(o|u) - C(u))}$$

Two free fidelity parameters:

$\text{fid}(\text{size})$ $\text{fid}(\text{color})$

Two free cost parameters:

$C(\text{size})$ $C(\text{color})$

Non-deterministic semantics

Literal listener

$$P_{S_1}(u|o) \propto e^{\lambda \cdot (\ln P_{L_0}(o|u) - C(u))}$$

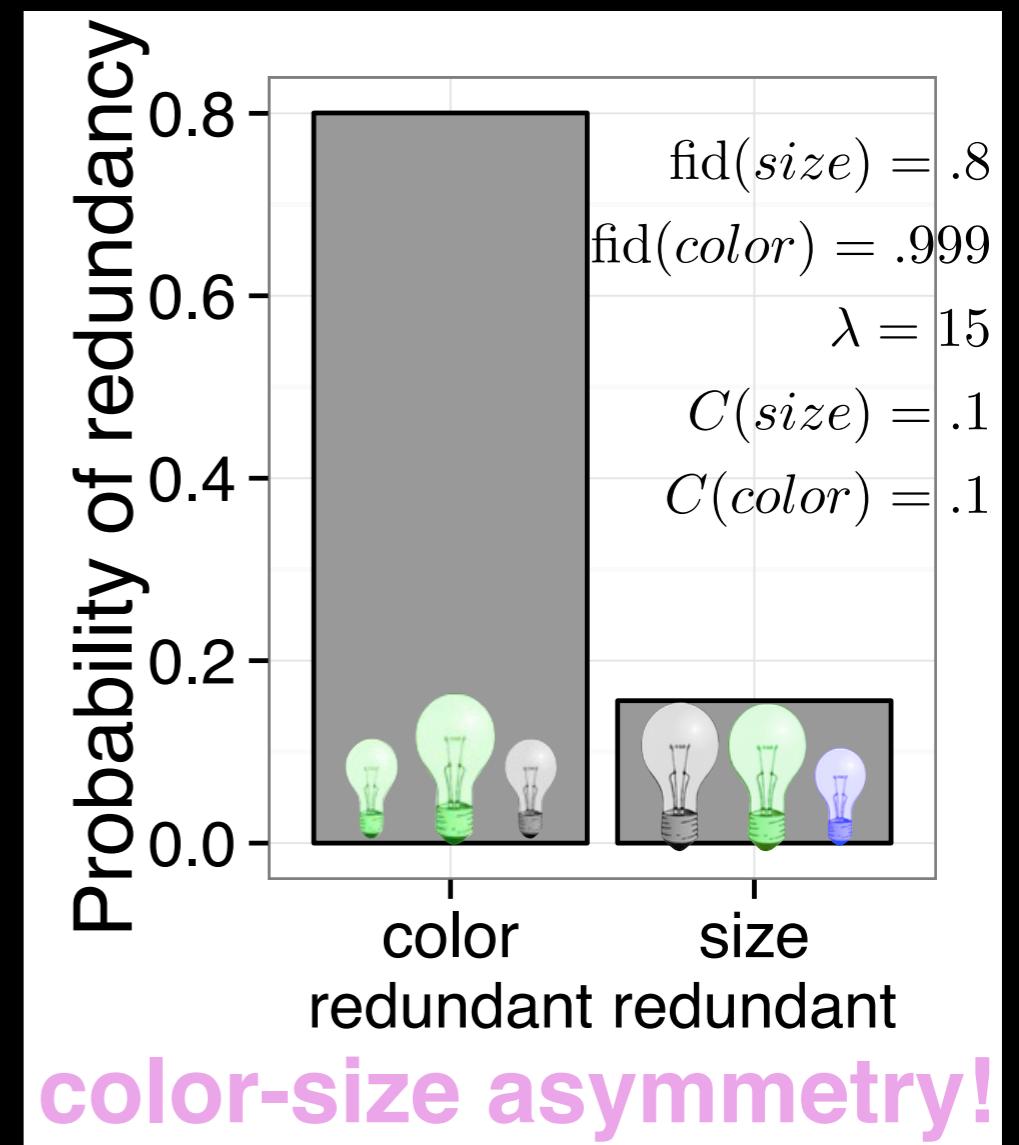

Two free fidelity parameters:

$\text{fid}(\text{size})$ $\text{fid}(\text{color})$

Two free cost parameters:

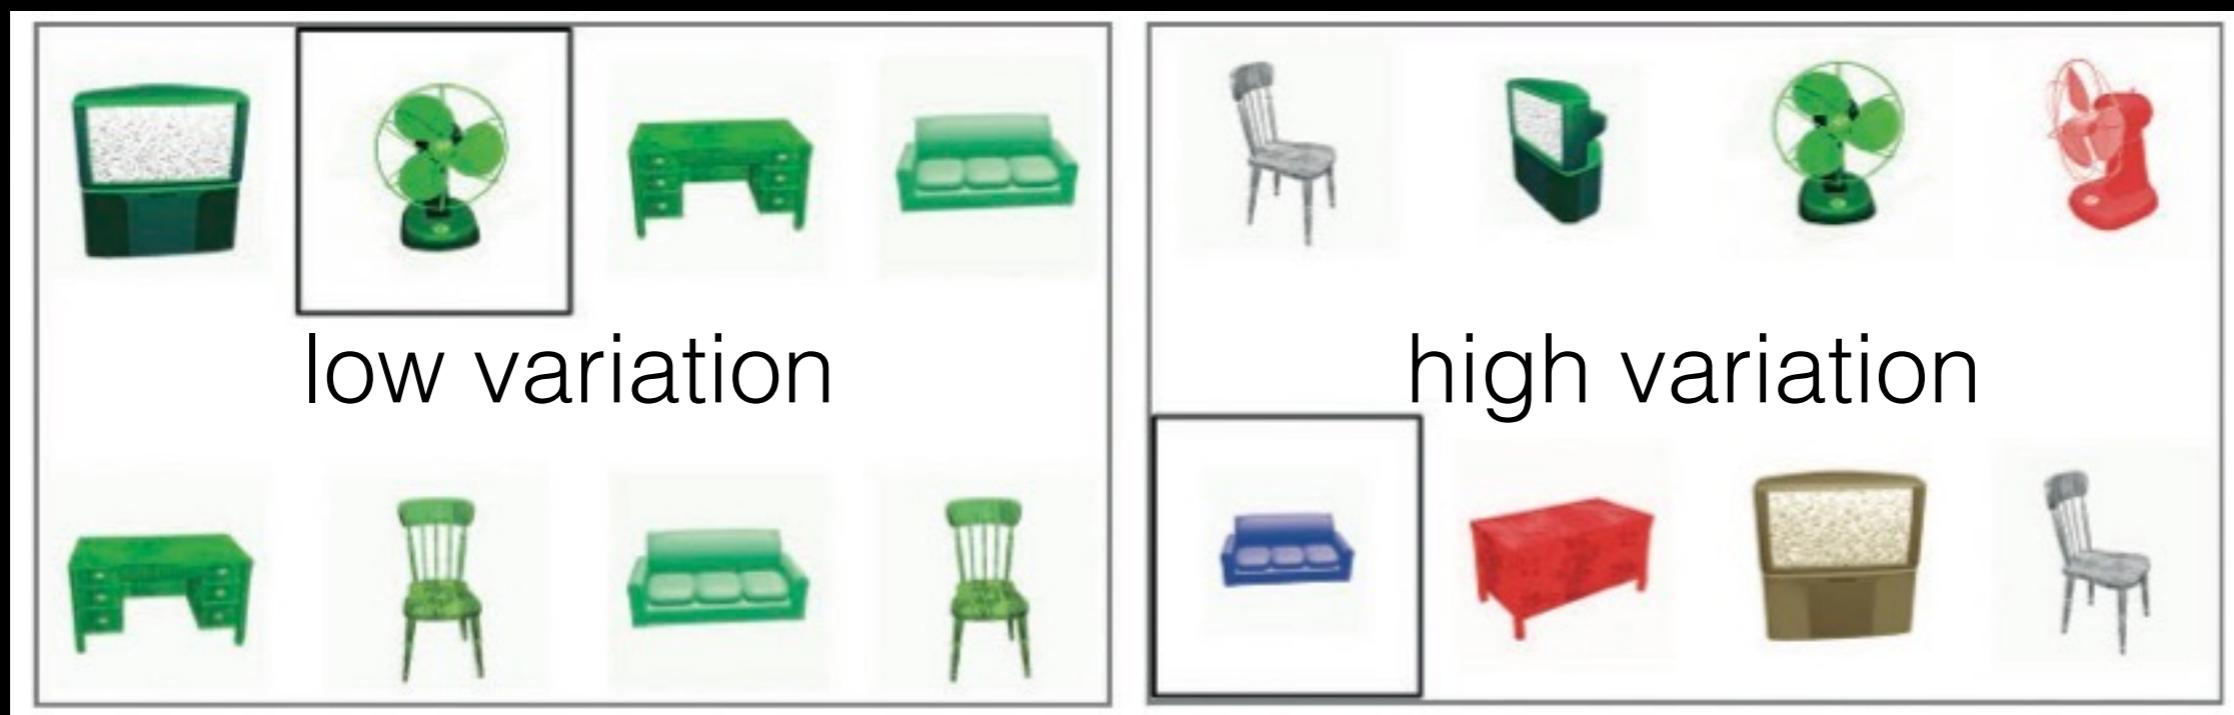

$C(\text{size})$ $C(\text{color})$

If modifiers don't "work perfectly",
adding modifiers adds information

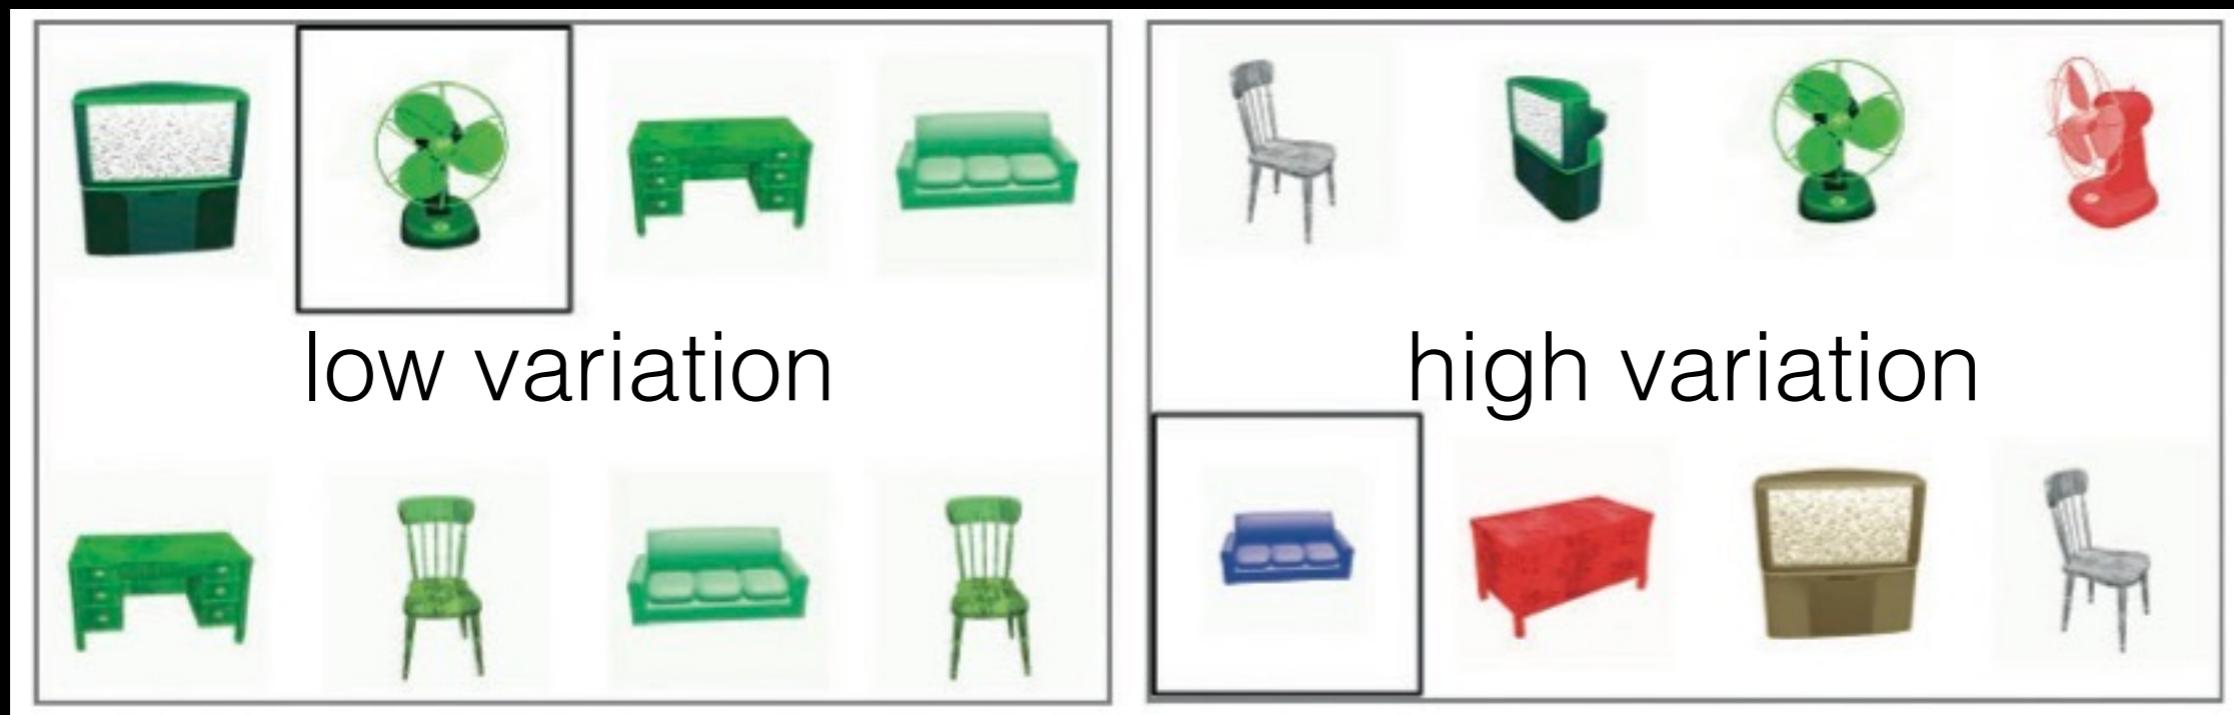

Independent empirical
evidence for RSA with non-
deterministic semantics?

Scene variation

Koolen et al 2013, Davies & Katsos 2013

Scene variation

more redundant color use in high-variation scenes

Koolen et al 2013, Davies & Katsos 2013

Scene variation

more redundant color use in high-variation scenes

Koolen et al 2013, Davies & Katsos 2013

non-deterministic RSA predicts this result

Independent
quantitative evidence
for non-deterministic
RSA?

Scene variation

scene variation increases probability of redundancy

Scene variation

scene variation increases probability of redundancy

$$\frac{n_{\text{diff}}}{n_{\text{total}}}$$

proportion of total distractors that don't share target value on insufficient dimension

Scene variation

scene variation increases probability of redundancy

$$\frac{n_{\text{diff}}}{n_{\text{total}}}$$

proportion of total distractors that don't share target value on insufficient dimension

sufficient dimension: size

insufficient dimension: color

$$\frac{n_{\text{red}}}{n_{\text{total}}} = \frac{2}{4} = .5$$

Scene variation

scene variation increases probability of redundancy

$$\frac{n_{\text{diff}}}{n_{\text{total}}}$$

proportion of total distractors that don't share target value on insufficient dimension

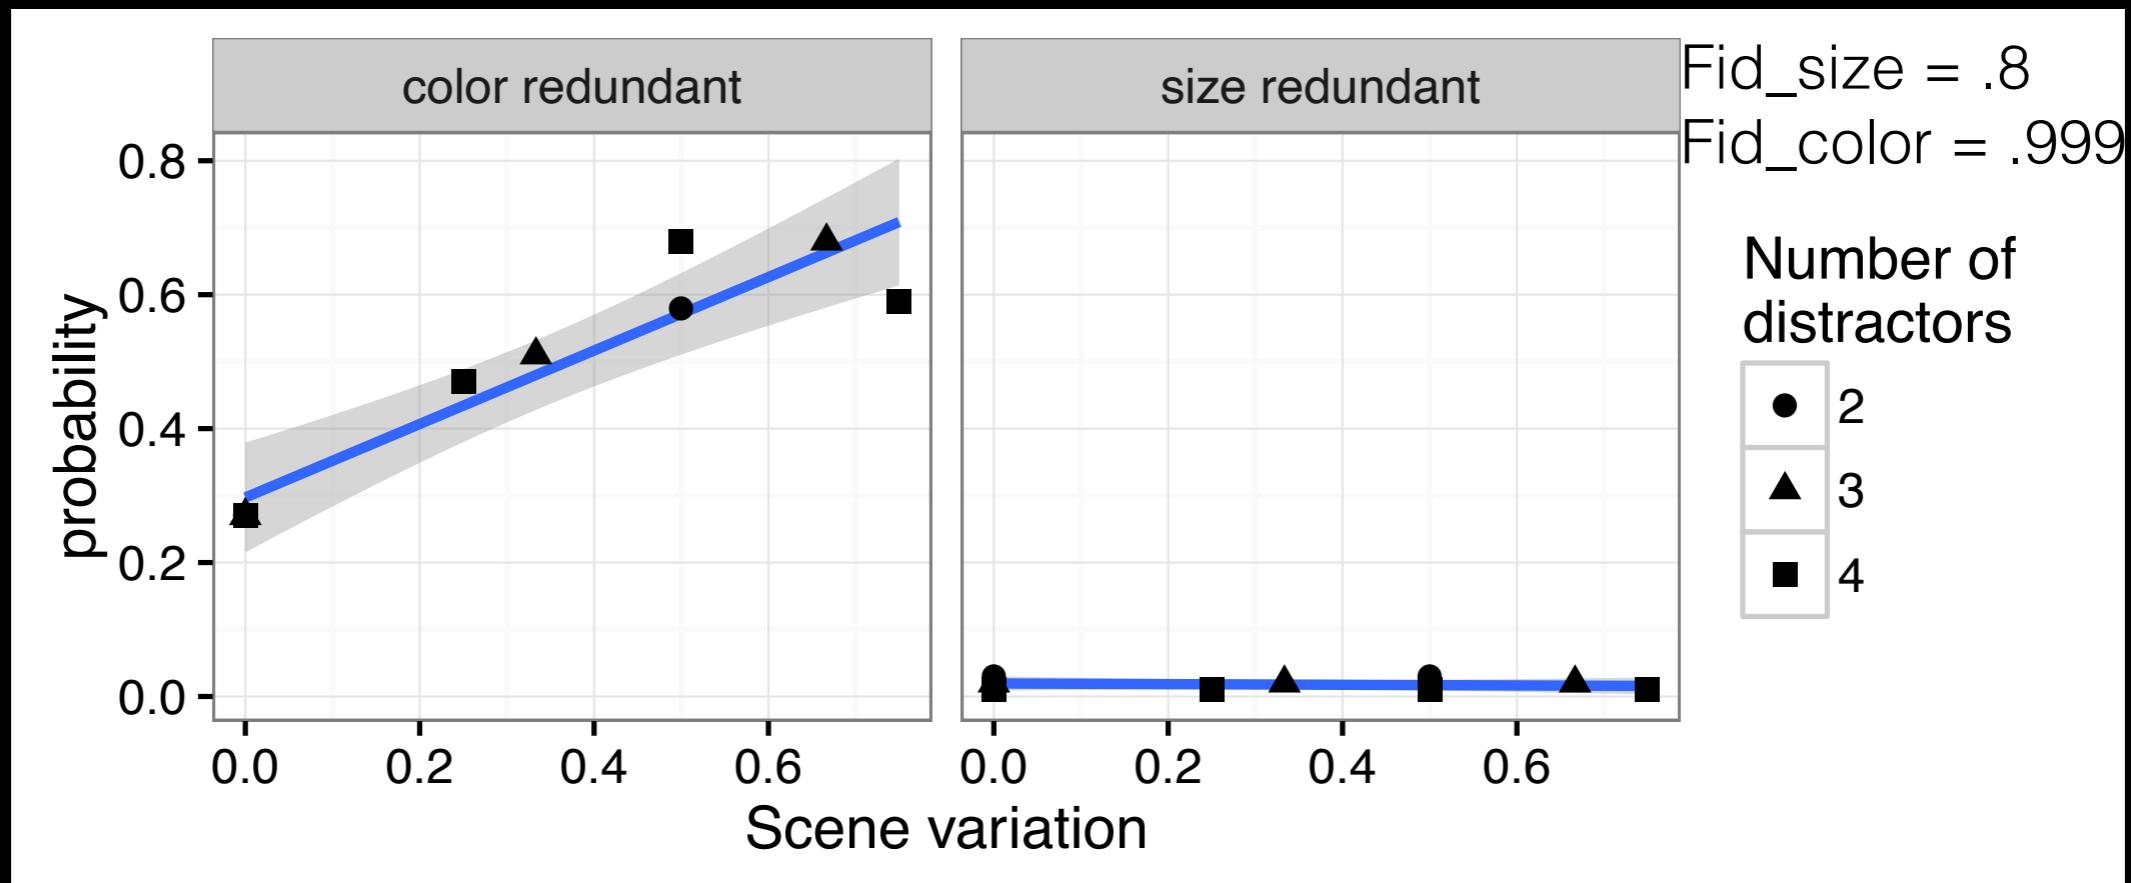

sufficient dimension: size

insufficient dimension: color

$$\frac{n_{\text{red}}}{n_{\text{total}}} = \frac{2}{4} = .5$$

greater proportion = more variation

Model predictions

Prediction: increase in redundant adjective use with increasing scene variation for color but not size

Interactive reference game experiment

- 58 pairs of participants on Mechanical Turk
- random assignment to speaker/listener role
- 72 trials (half targets, half fillers)
- 36 object types
- on all target trials, one of size or color was sufficient
- **scene variation manipulation:**
 - total number of distractors (2, 3, 4)
 - number of distractors that shared the insufficient feature value with target

Speaker's perspective

You: the stapler

listener: which one??

You: big purple

Production study: interactive
reference game experiment

You are the speaker.

Send messages to tell the listener which object is the target.

blue banana

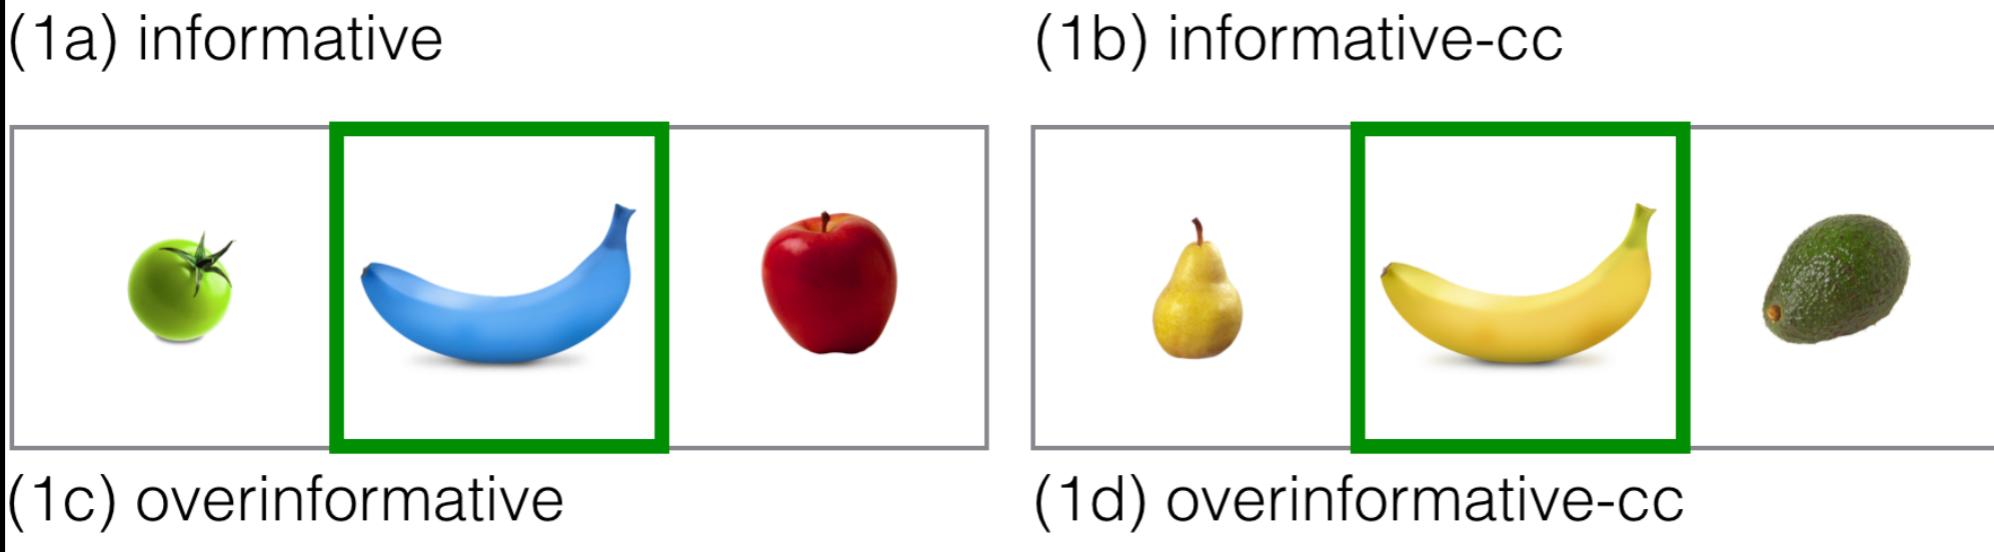

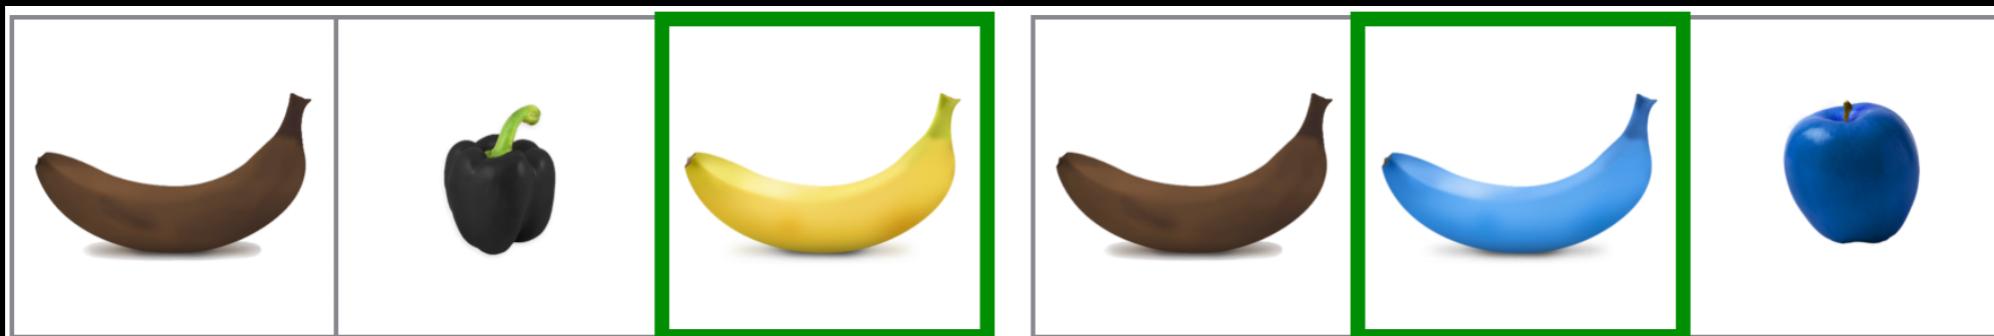

Send

The interface consists of several distinct components:

- A large black rectangular area at the top.
- A blue header bar with a thin black border. It contains the text "blue banana" in a black sans-serif font on the left and a blue rectangular "Send" button on the right.
- A white rectangular area below the header, divided into three vertical columns by thin black lines.
- The first column contains a brown banana.
- The second column contains a blue banana, which is highlighted with a thick green border.
- The third column contains a blue apple.

Experimental details

- 60 pairs of participants on Mechanical Turk
- random assignment to speaker/listener role
- 42 trials
- varied contextual informativeness of utterances:

presence of same type

x

presence of color competitor

Data processing

“blue”

color

“yellow banana”

color-and-type

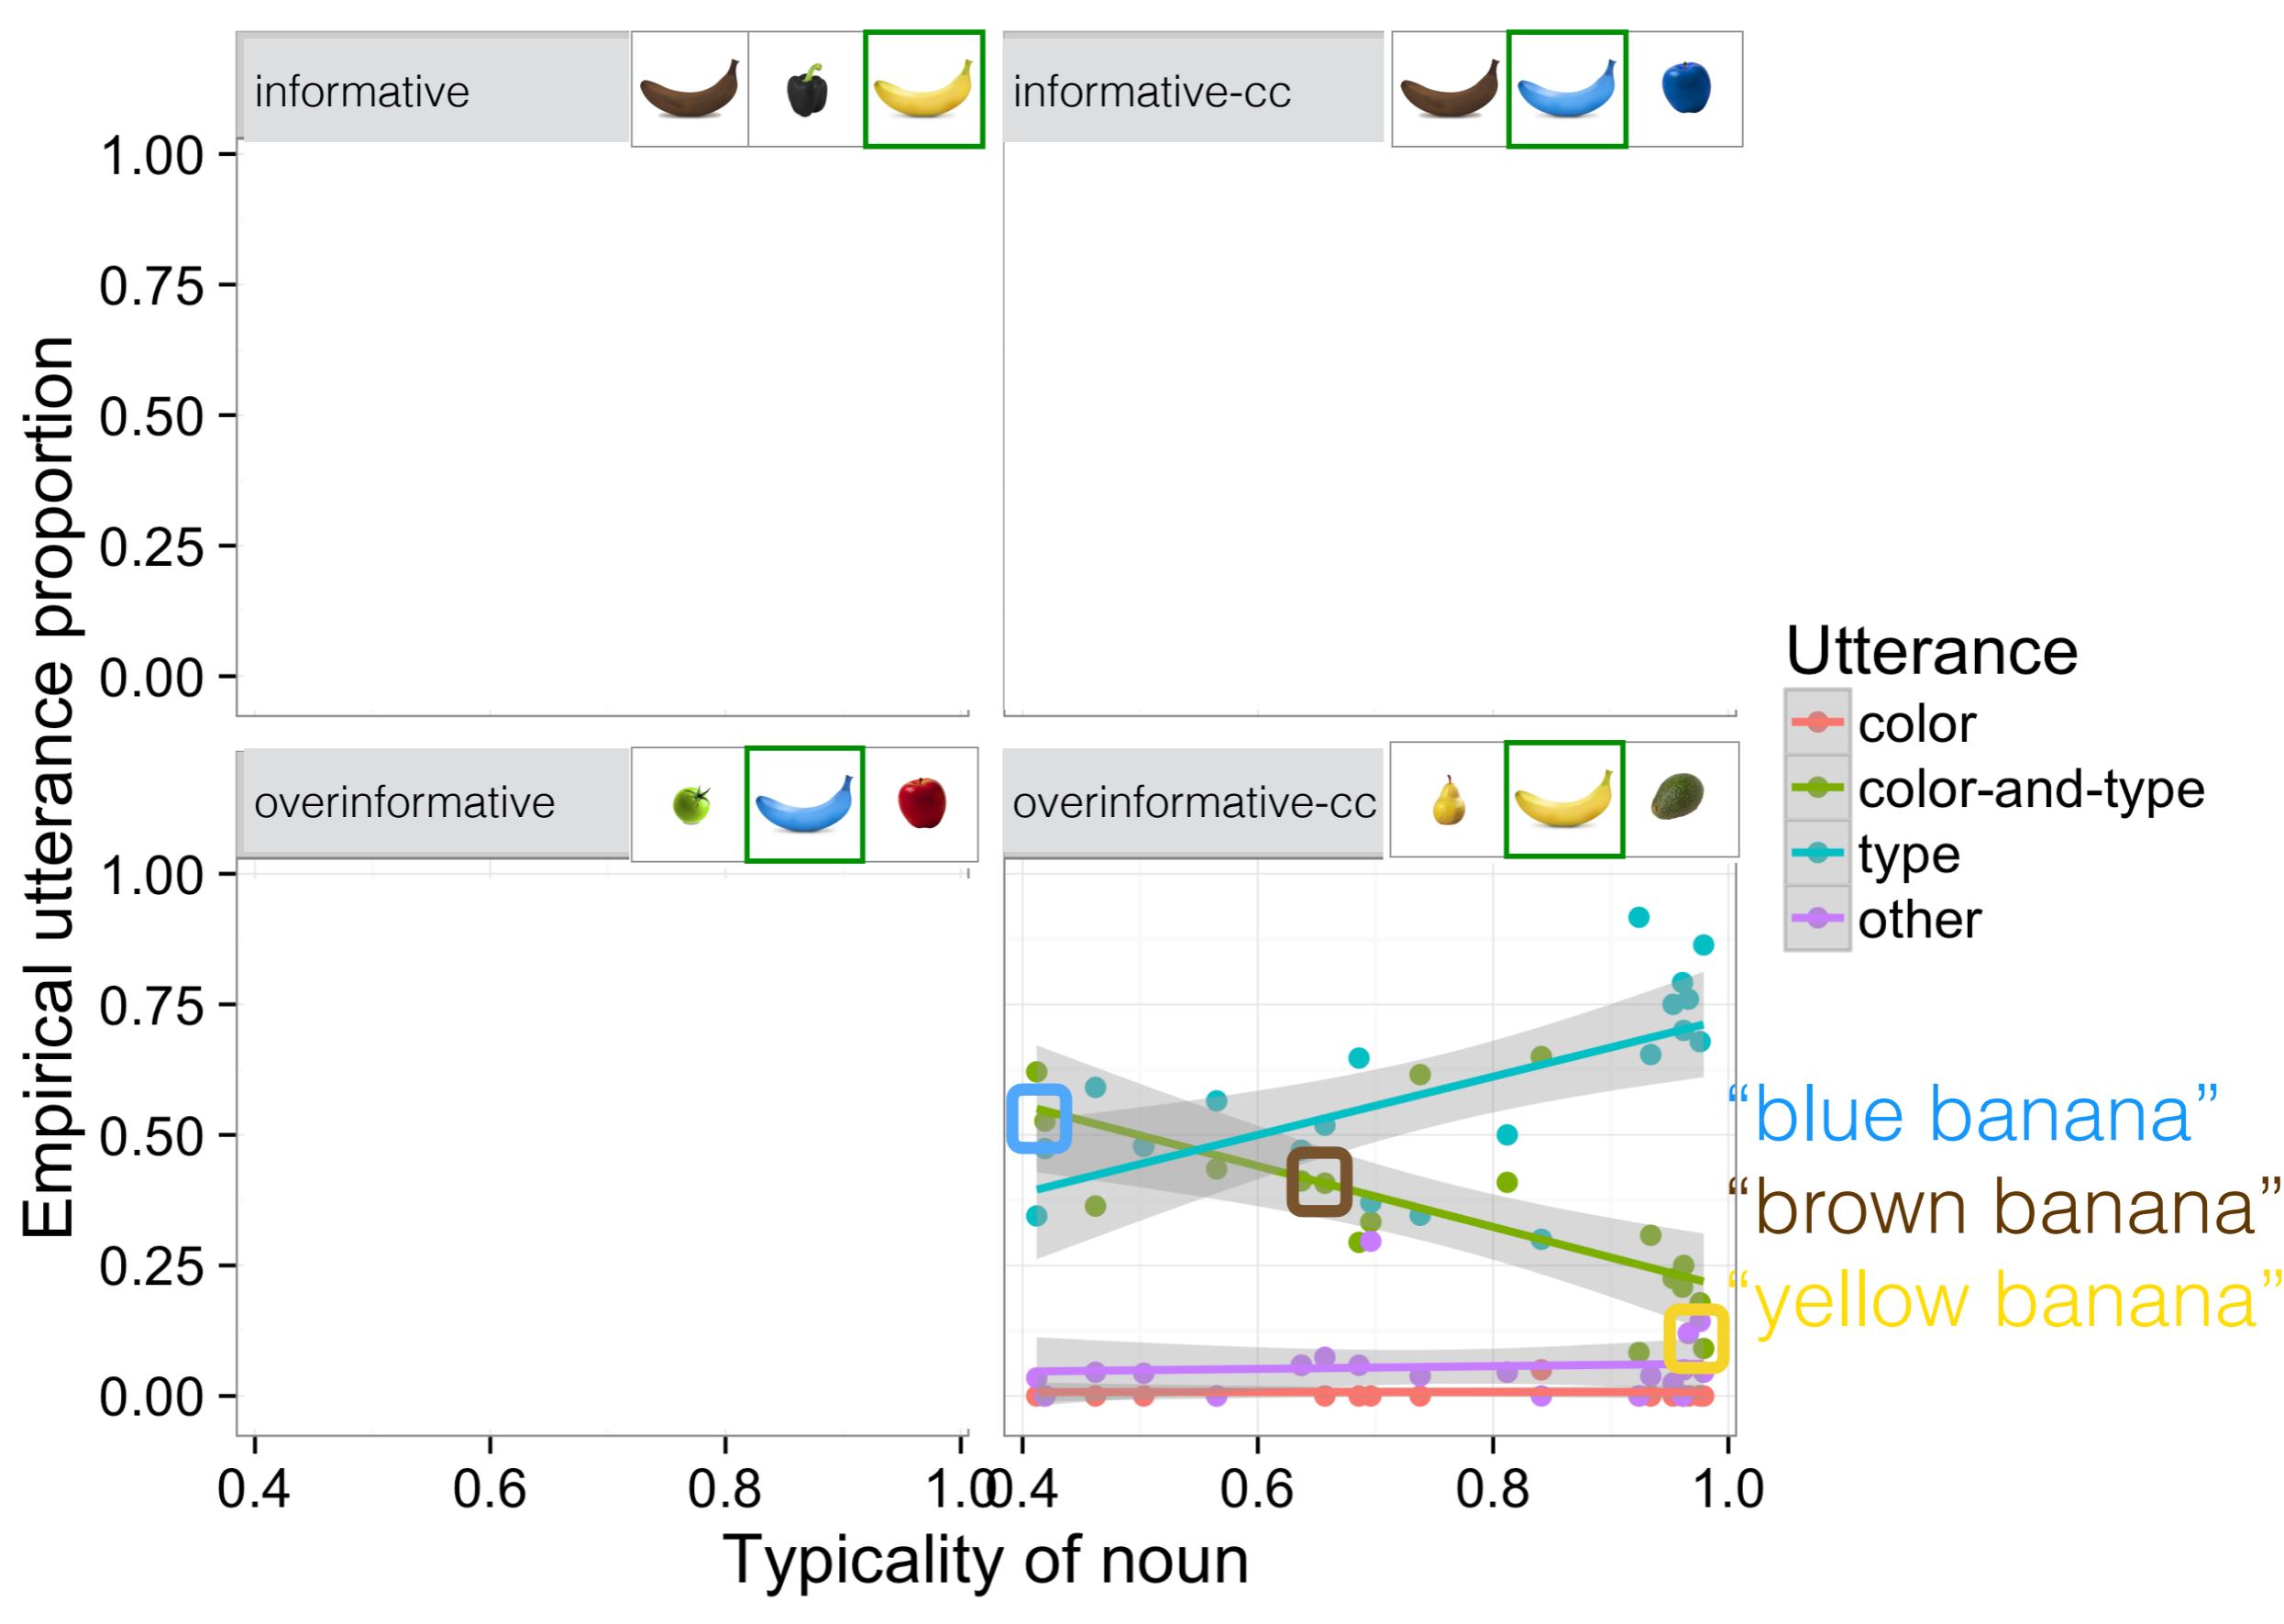

“the banana”

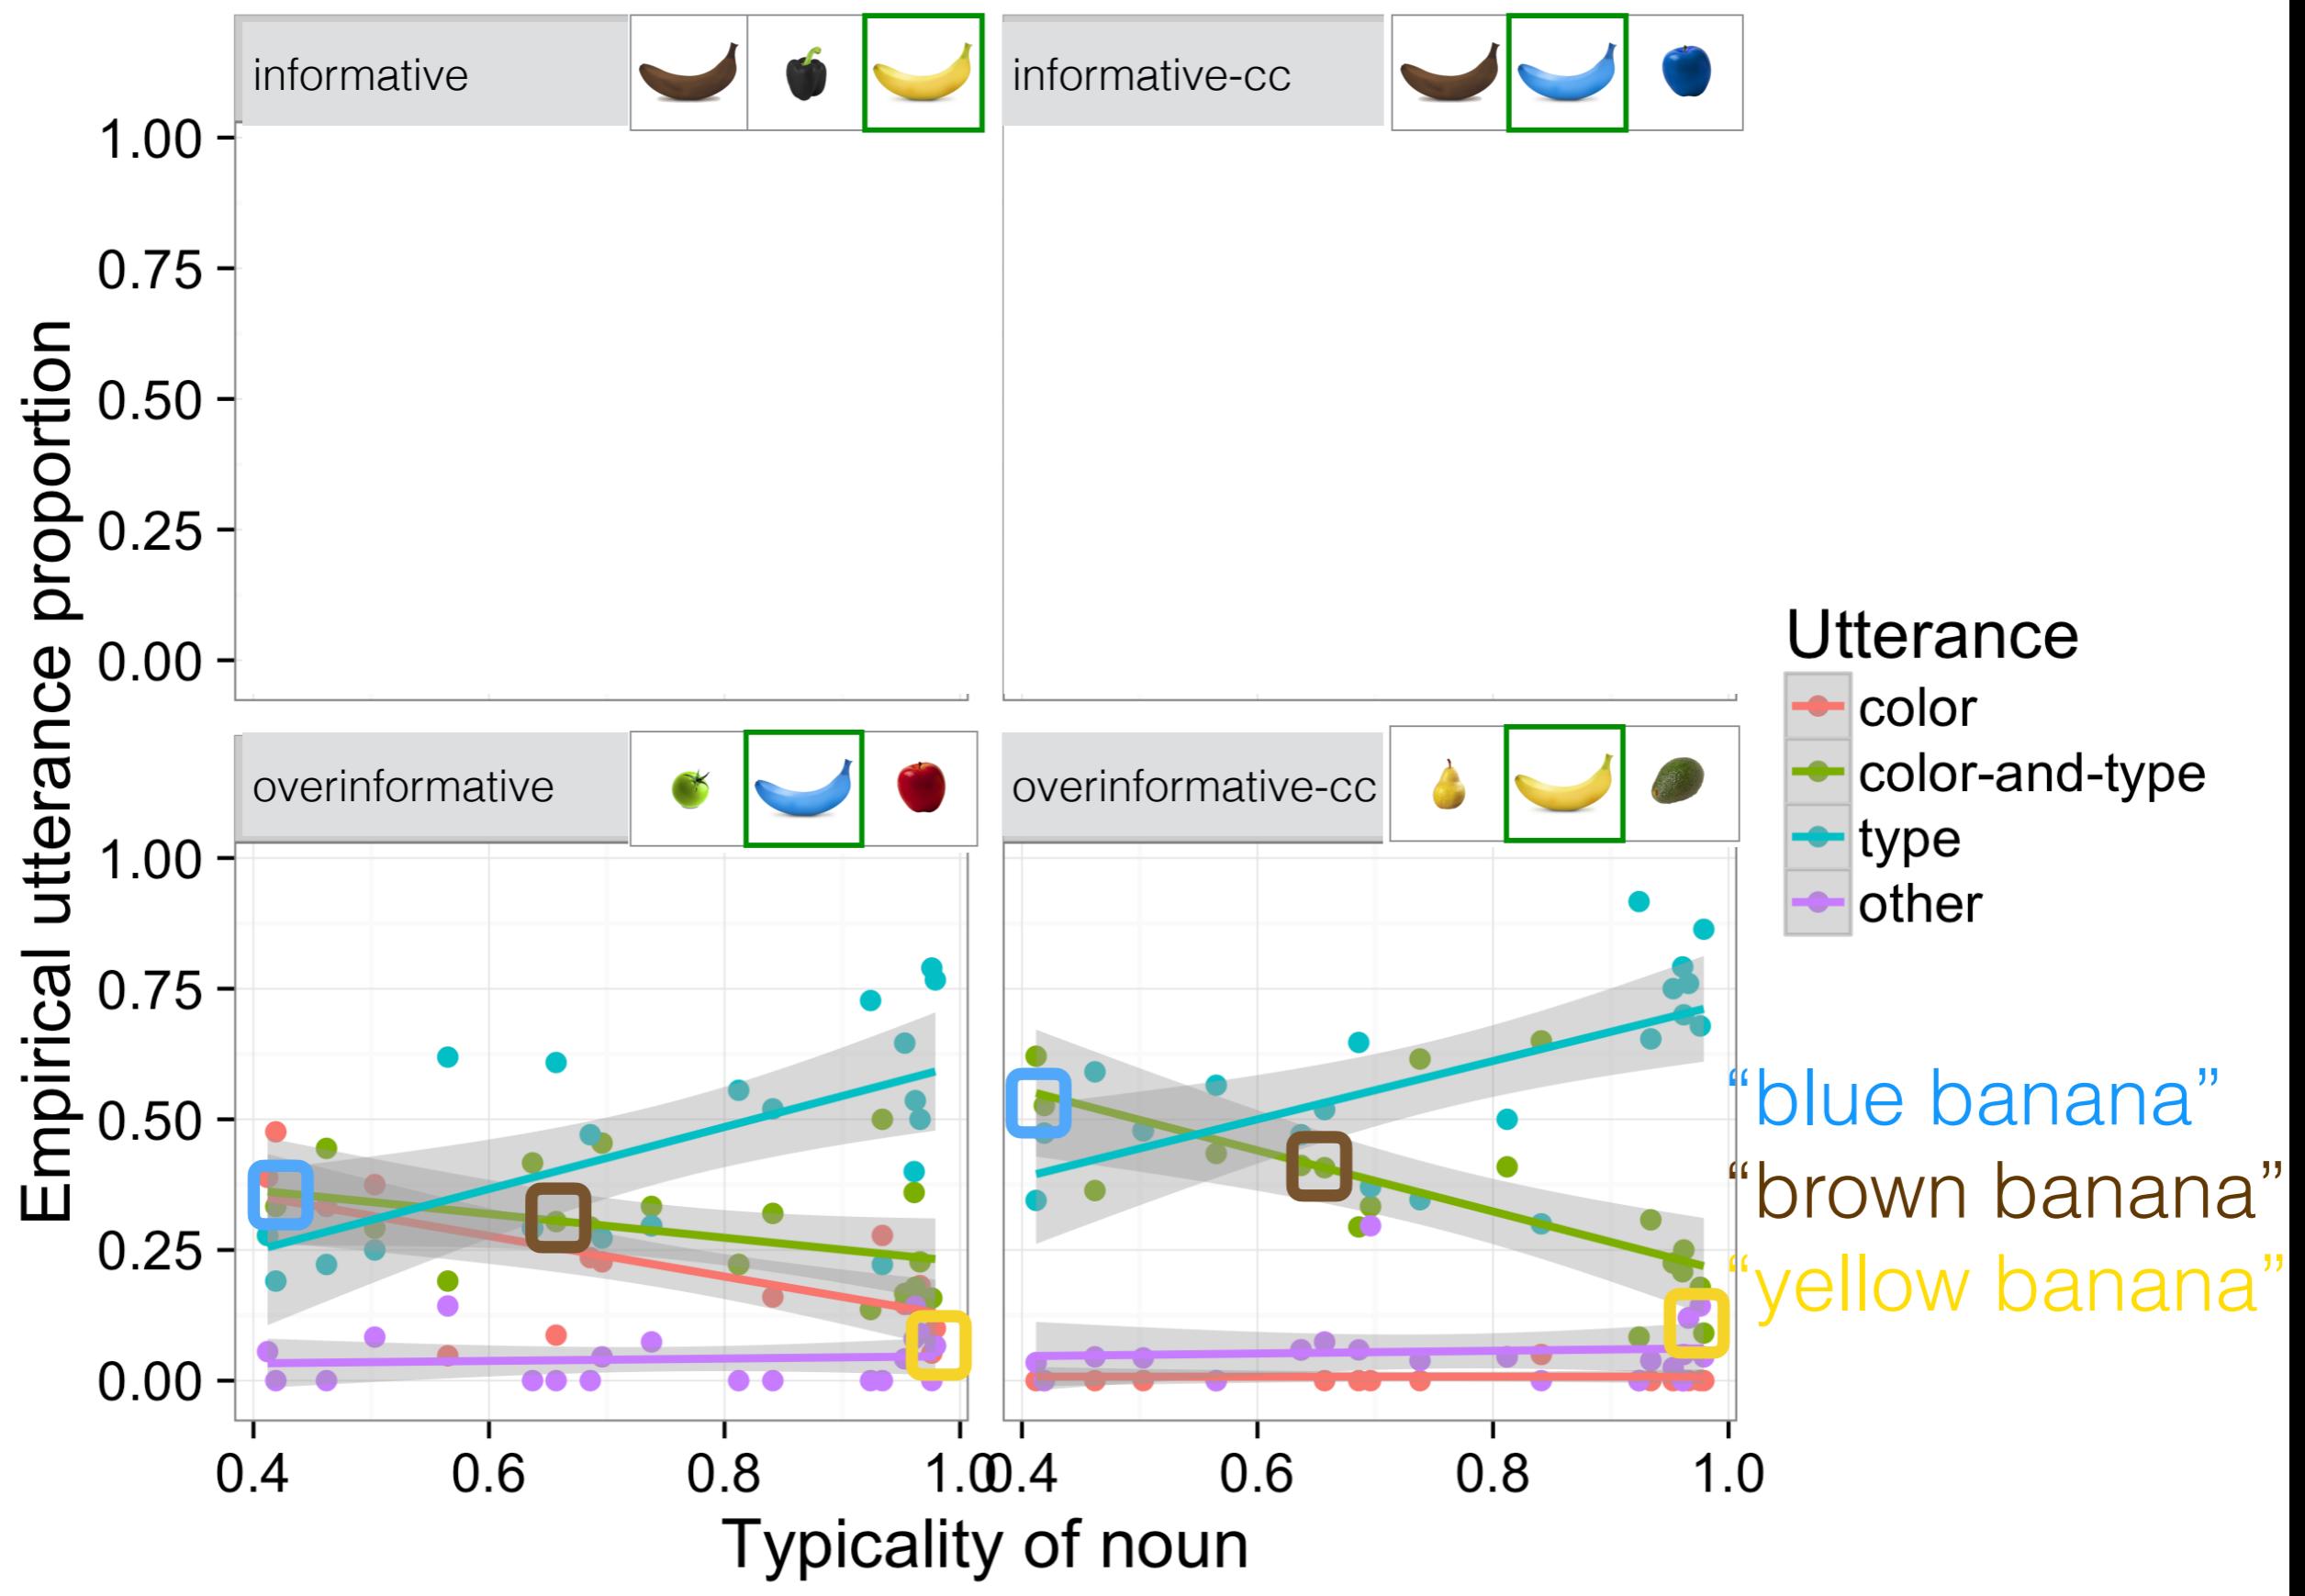

type

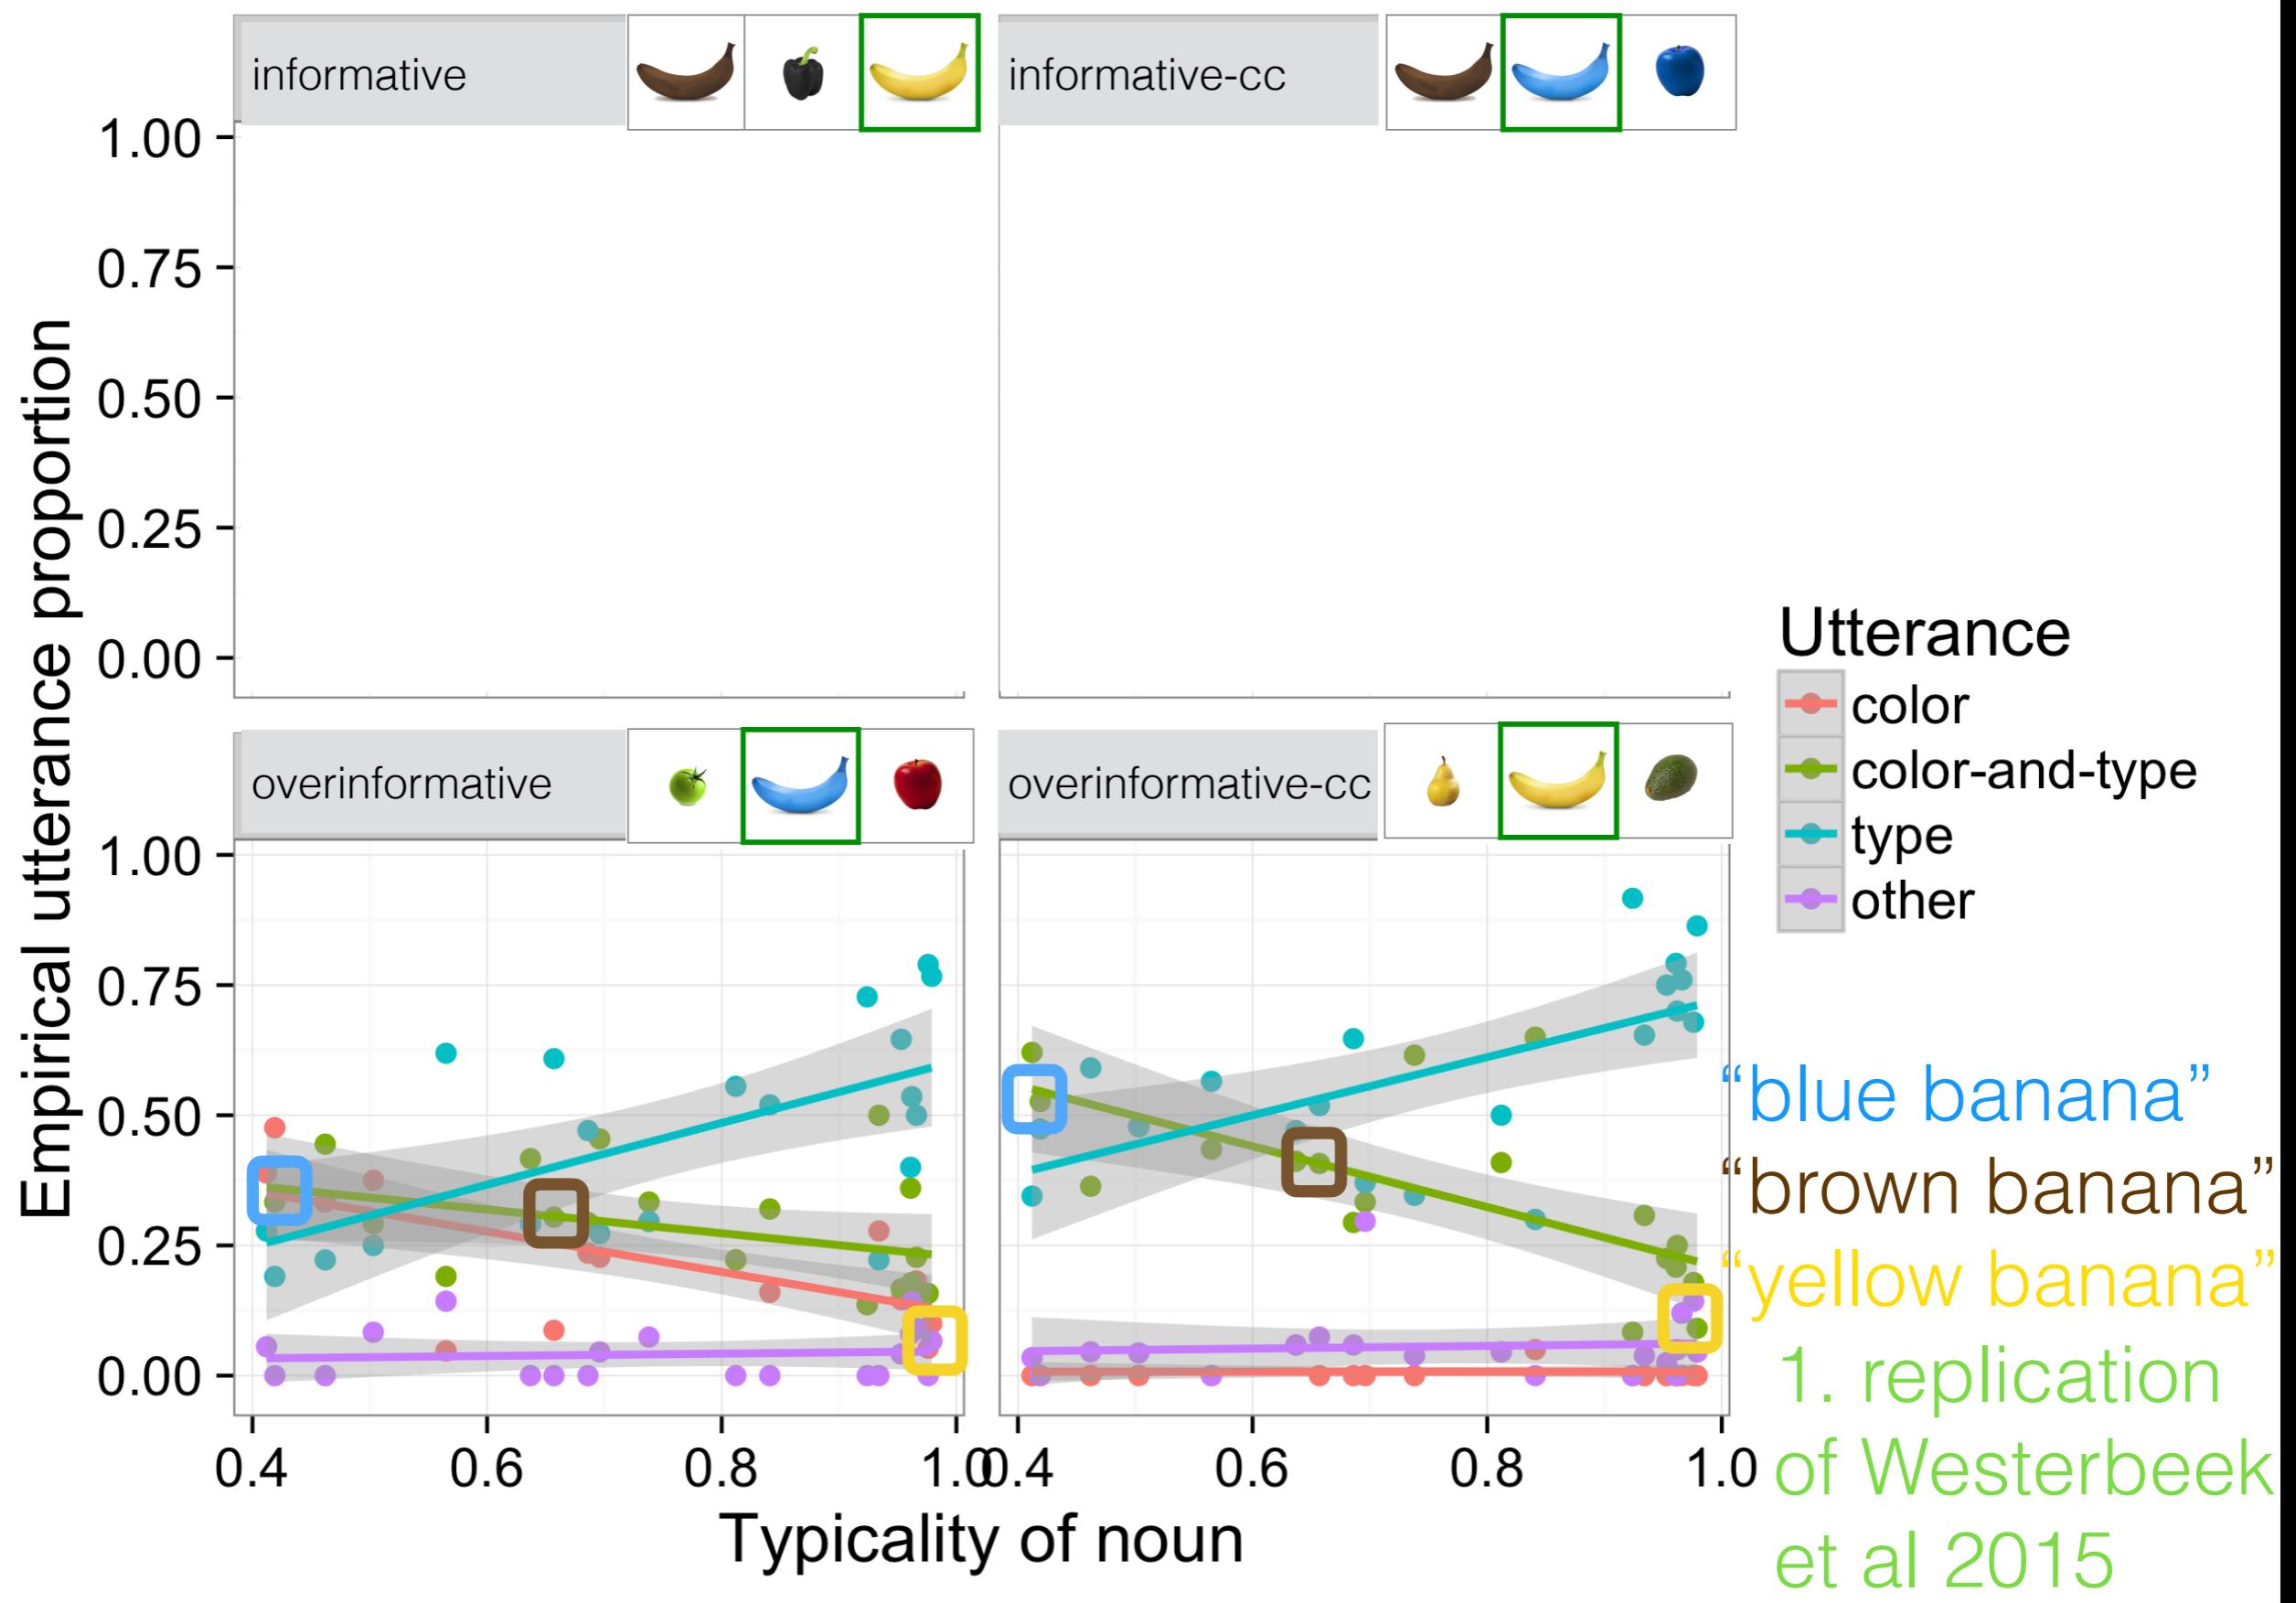

“banana”

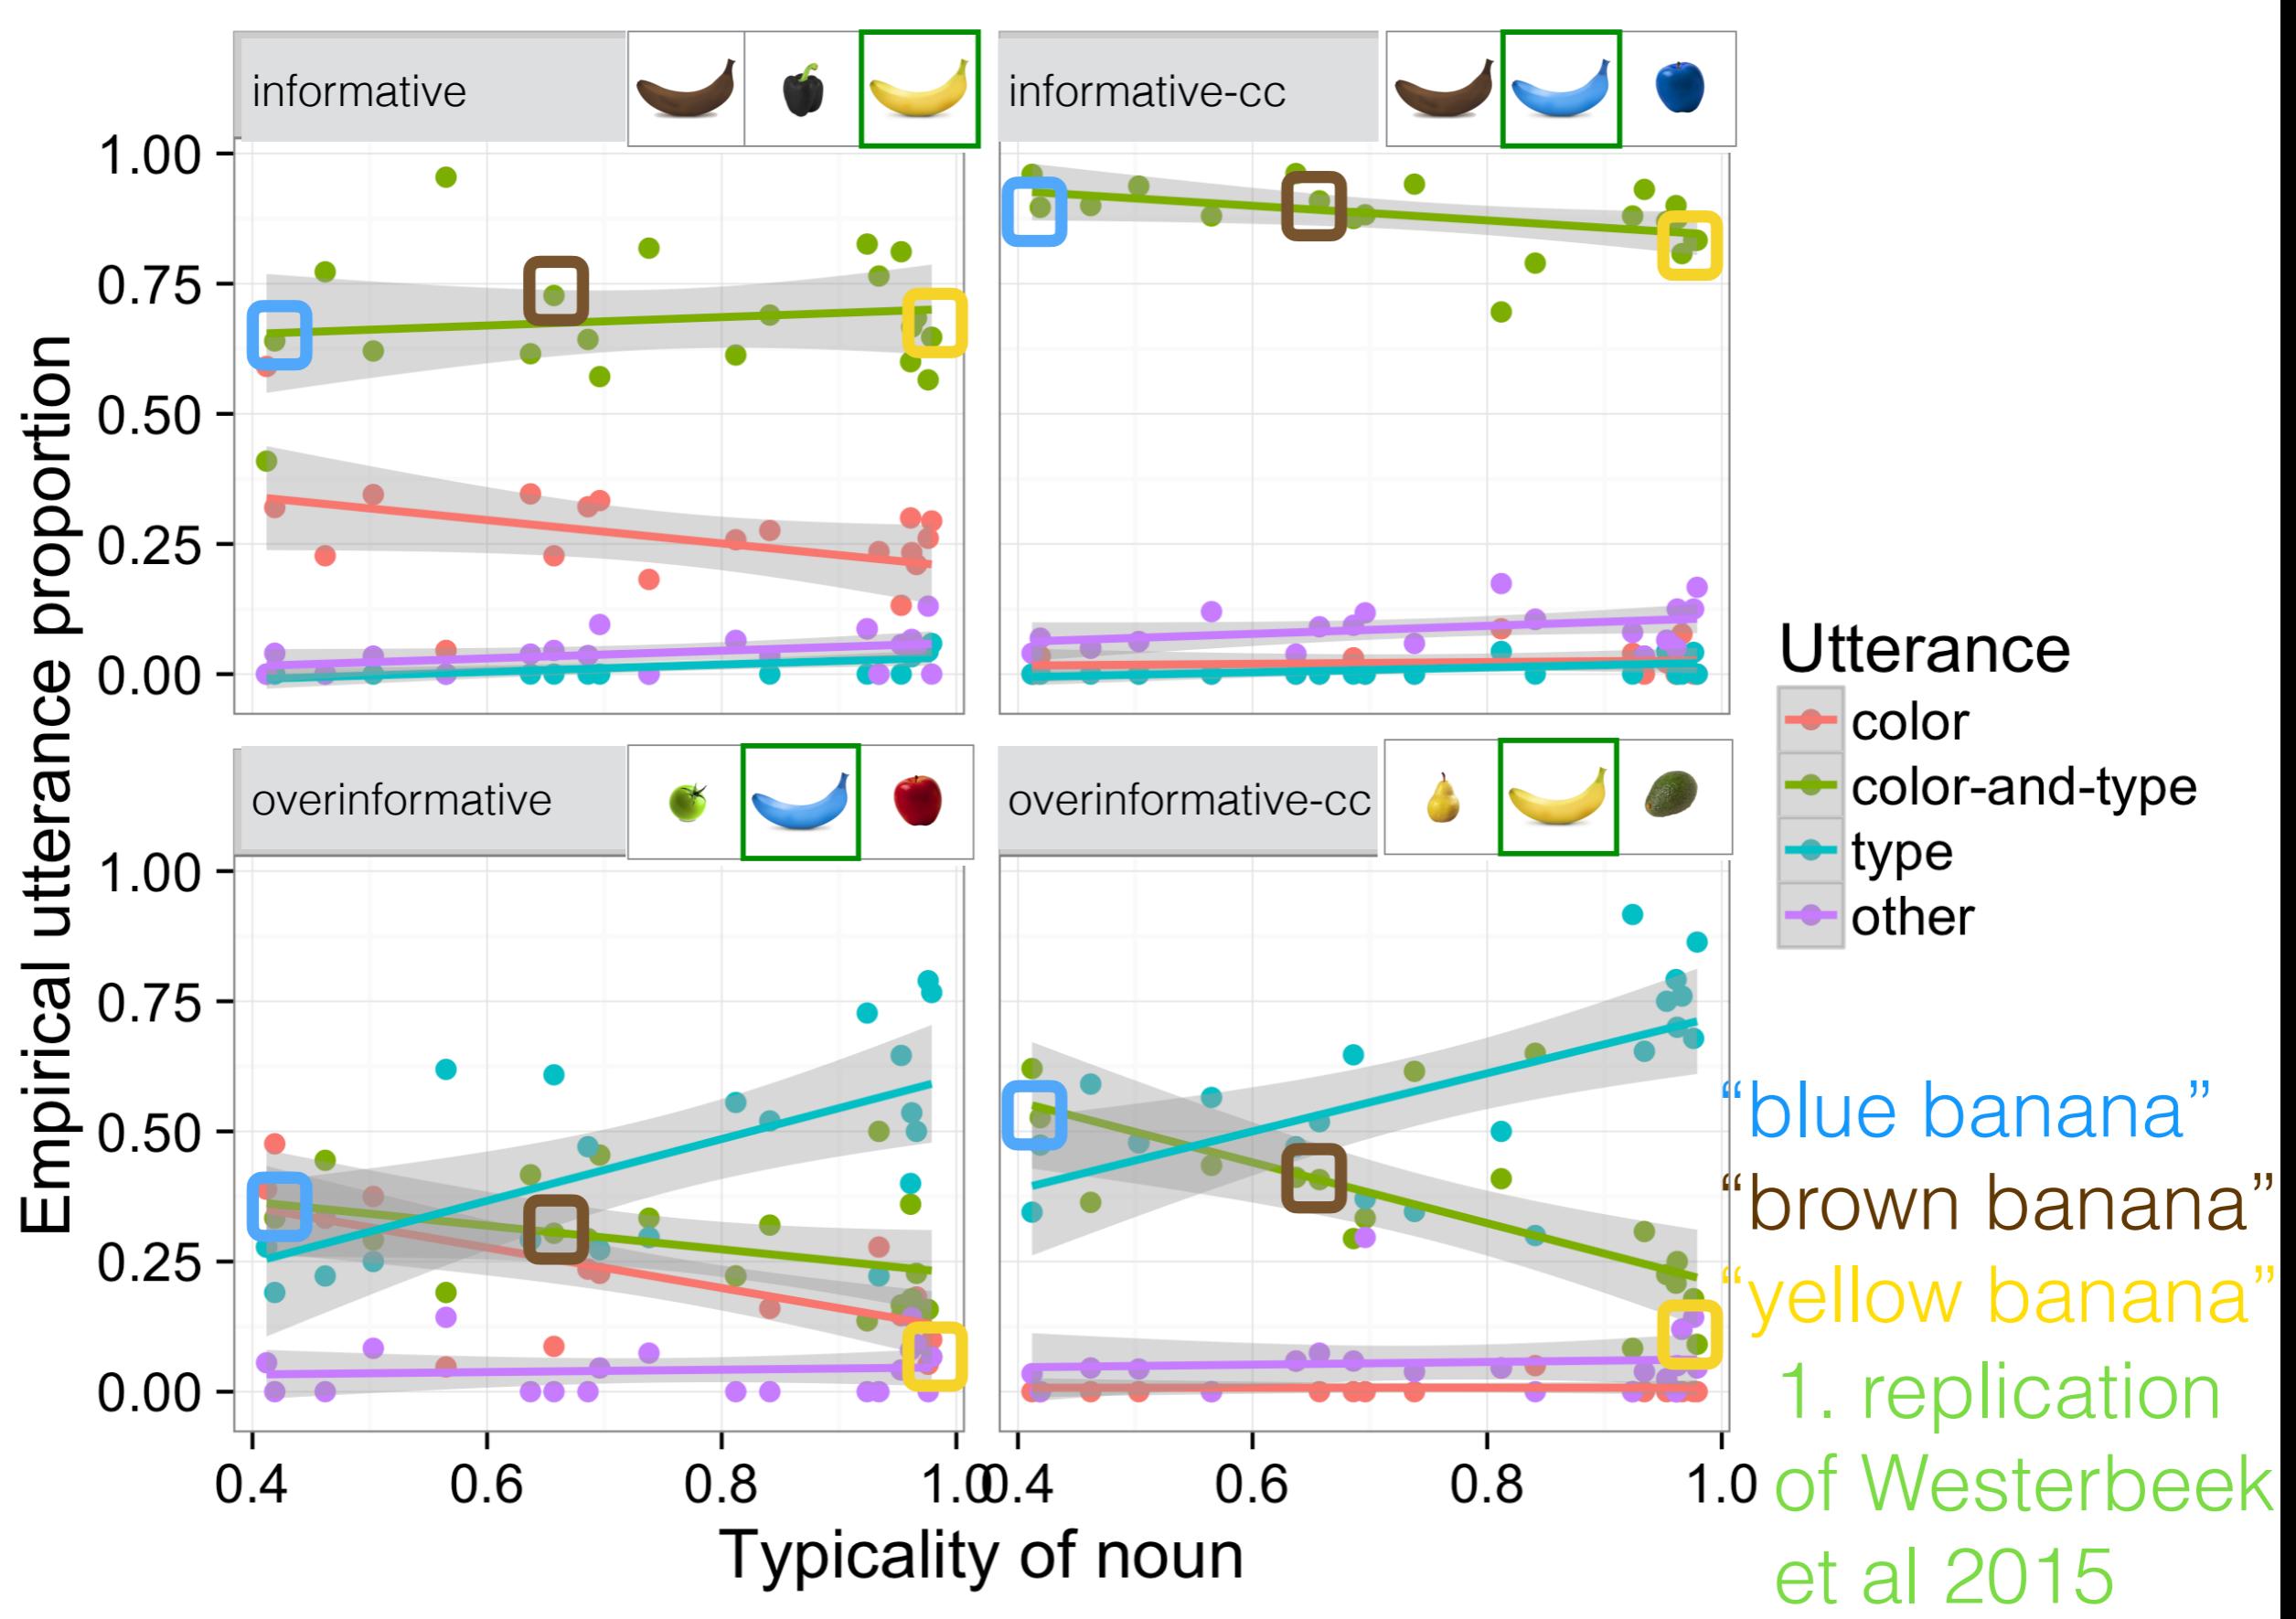

“funky carrot”

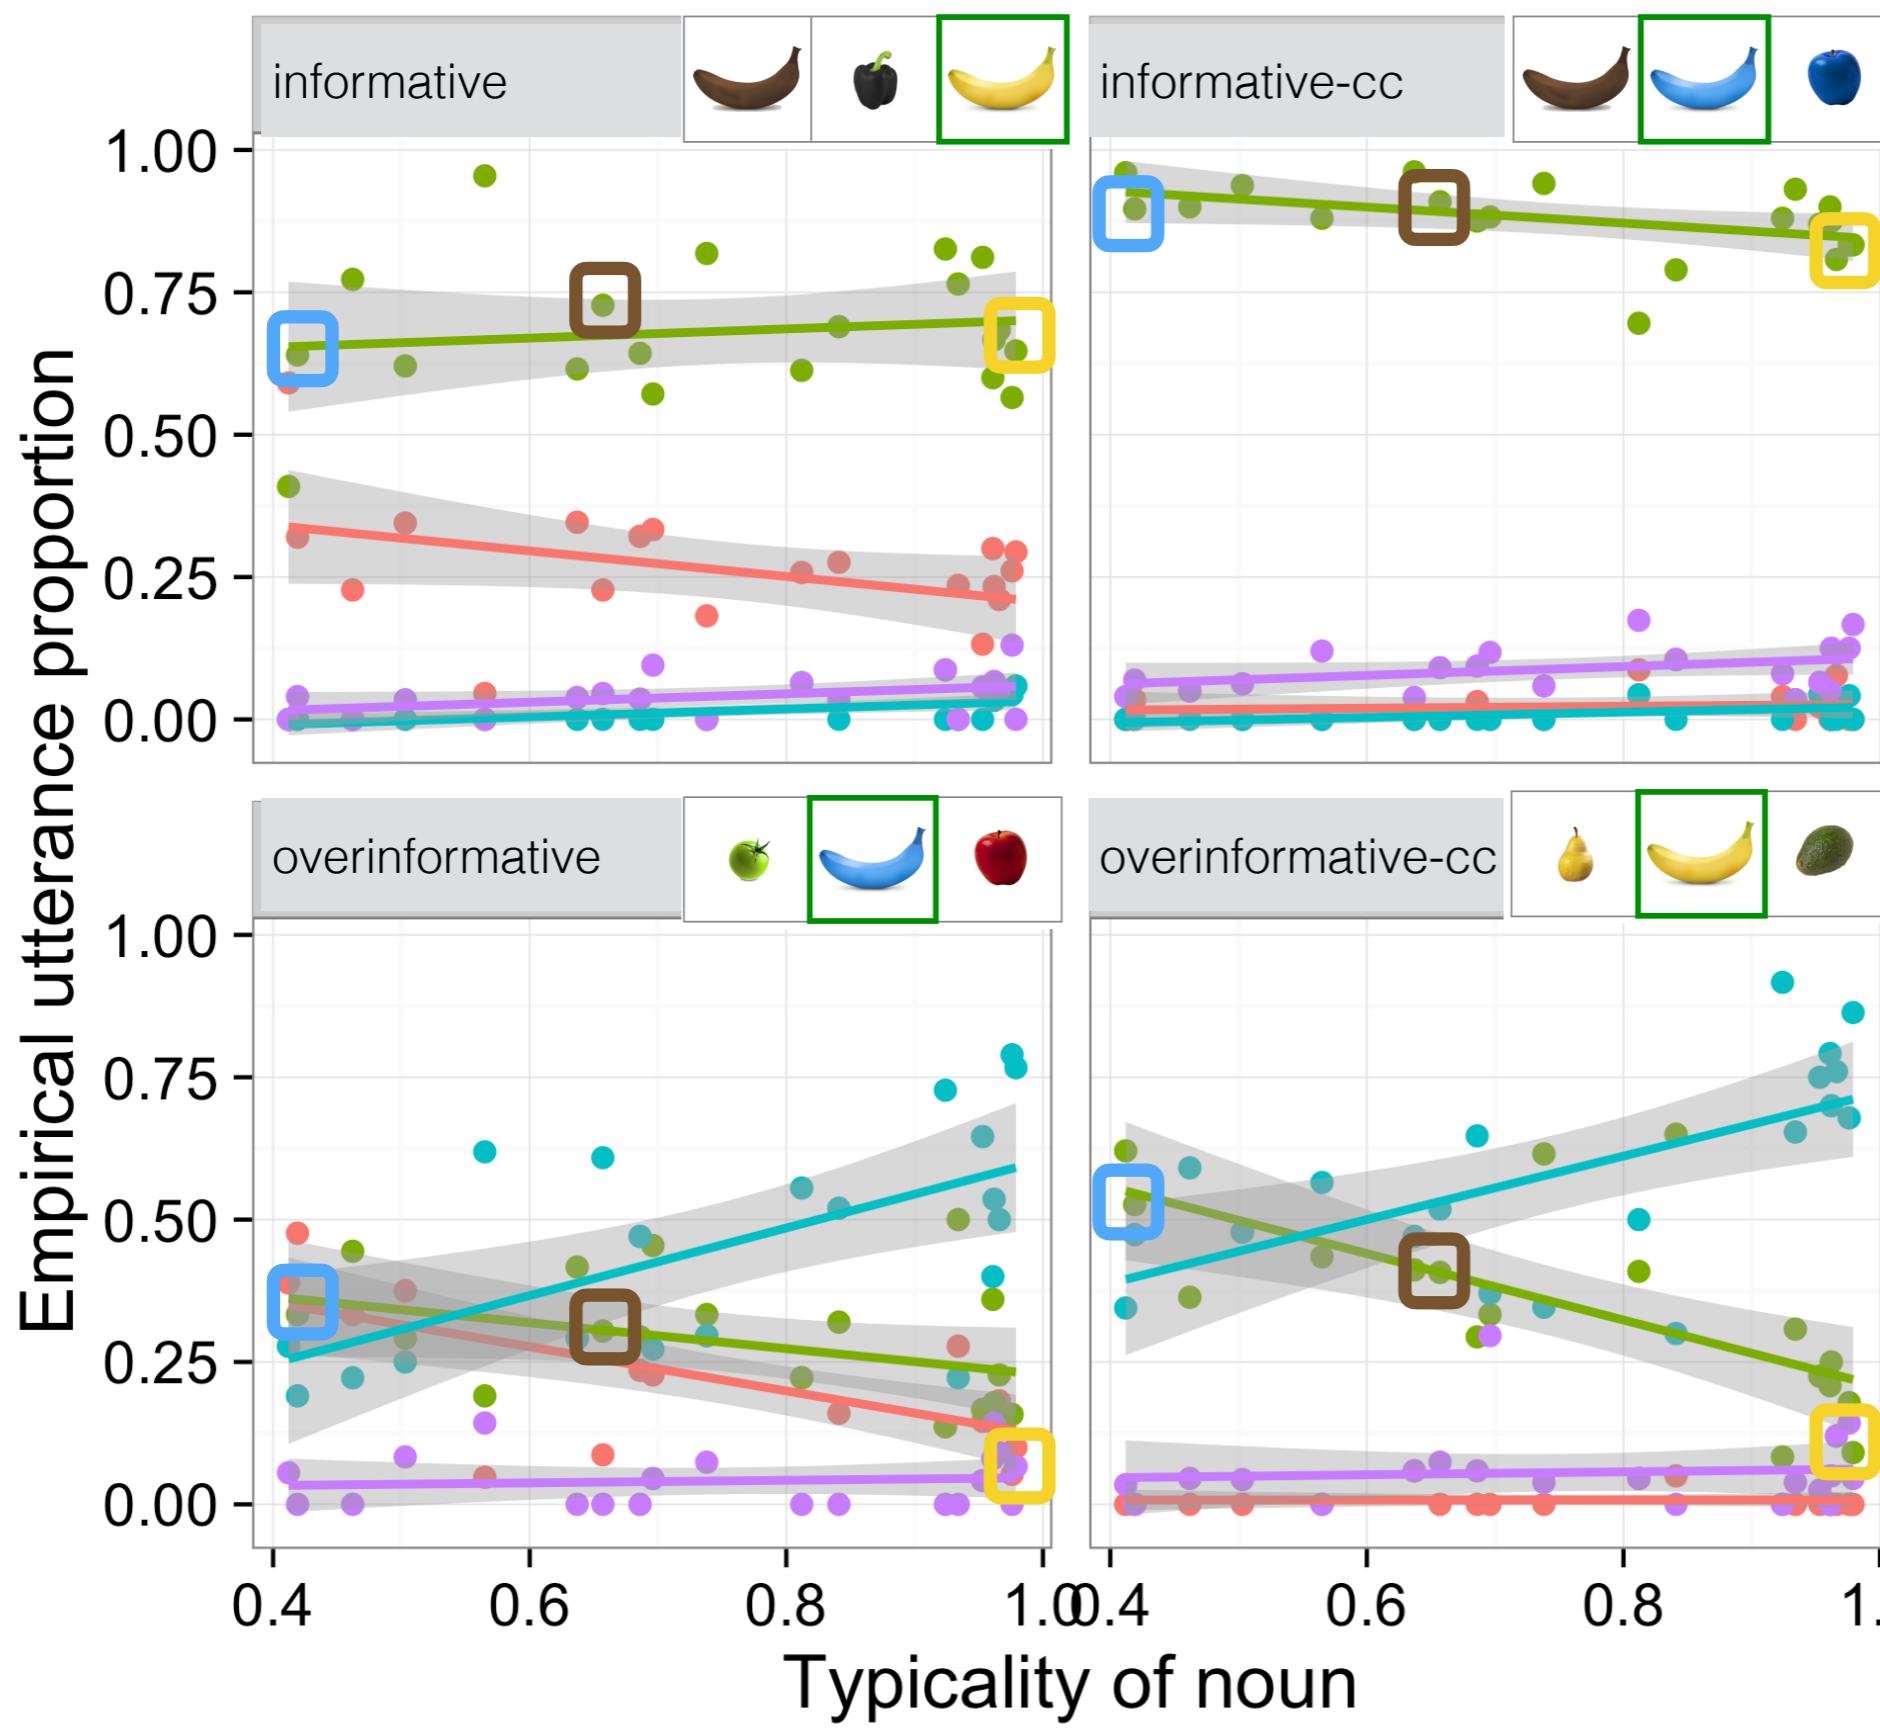

other

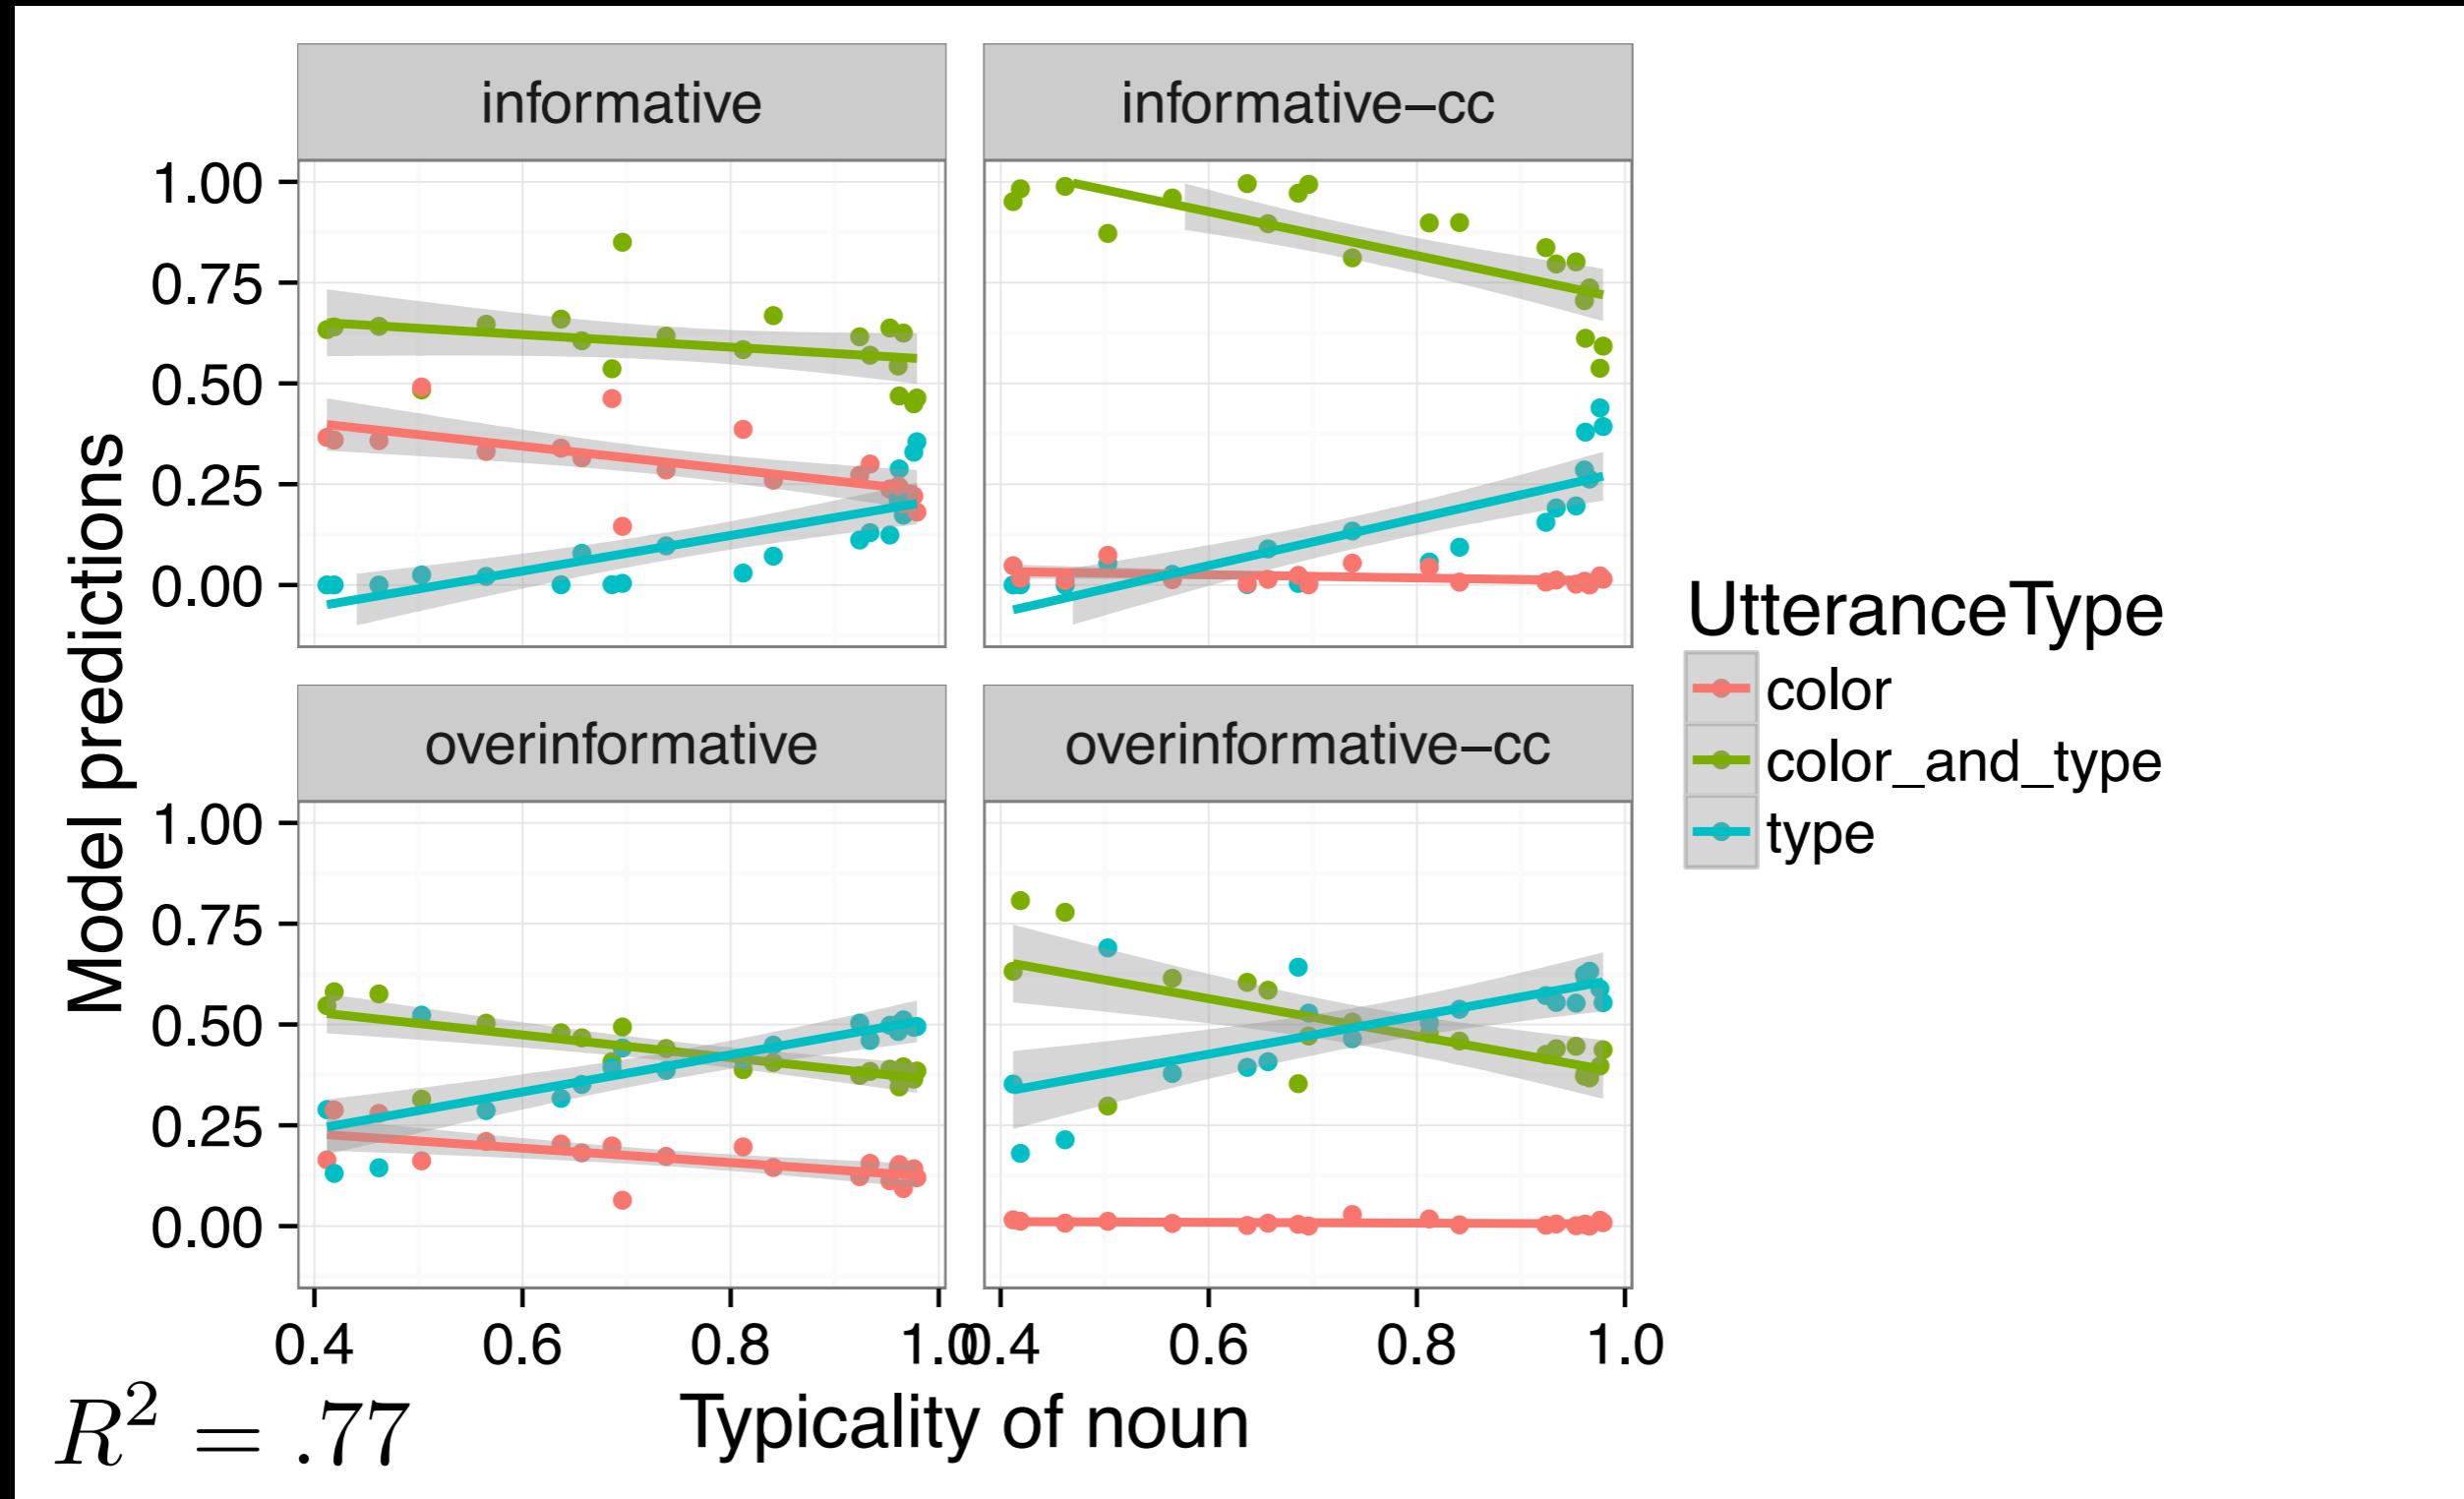

2. novel demonstration of typicality effects even when color is 'informative'

Utterance

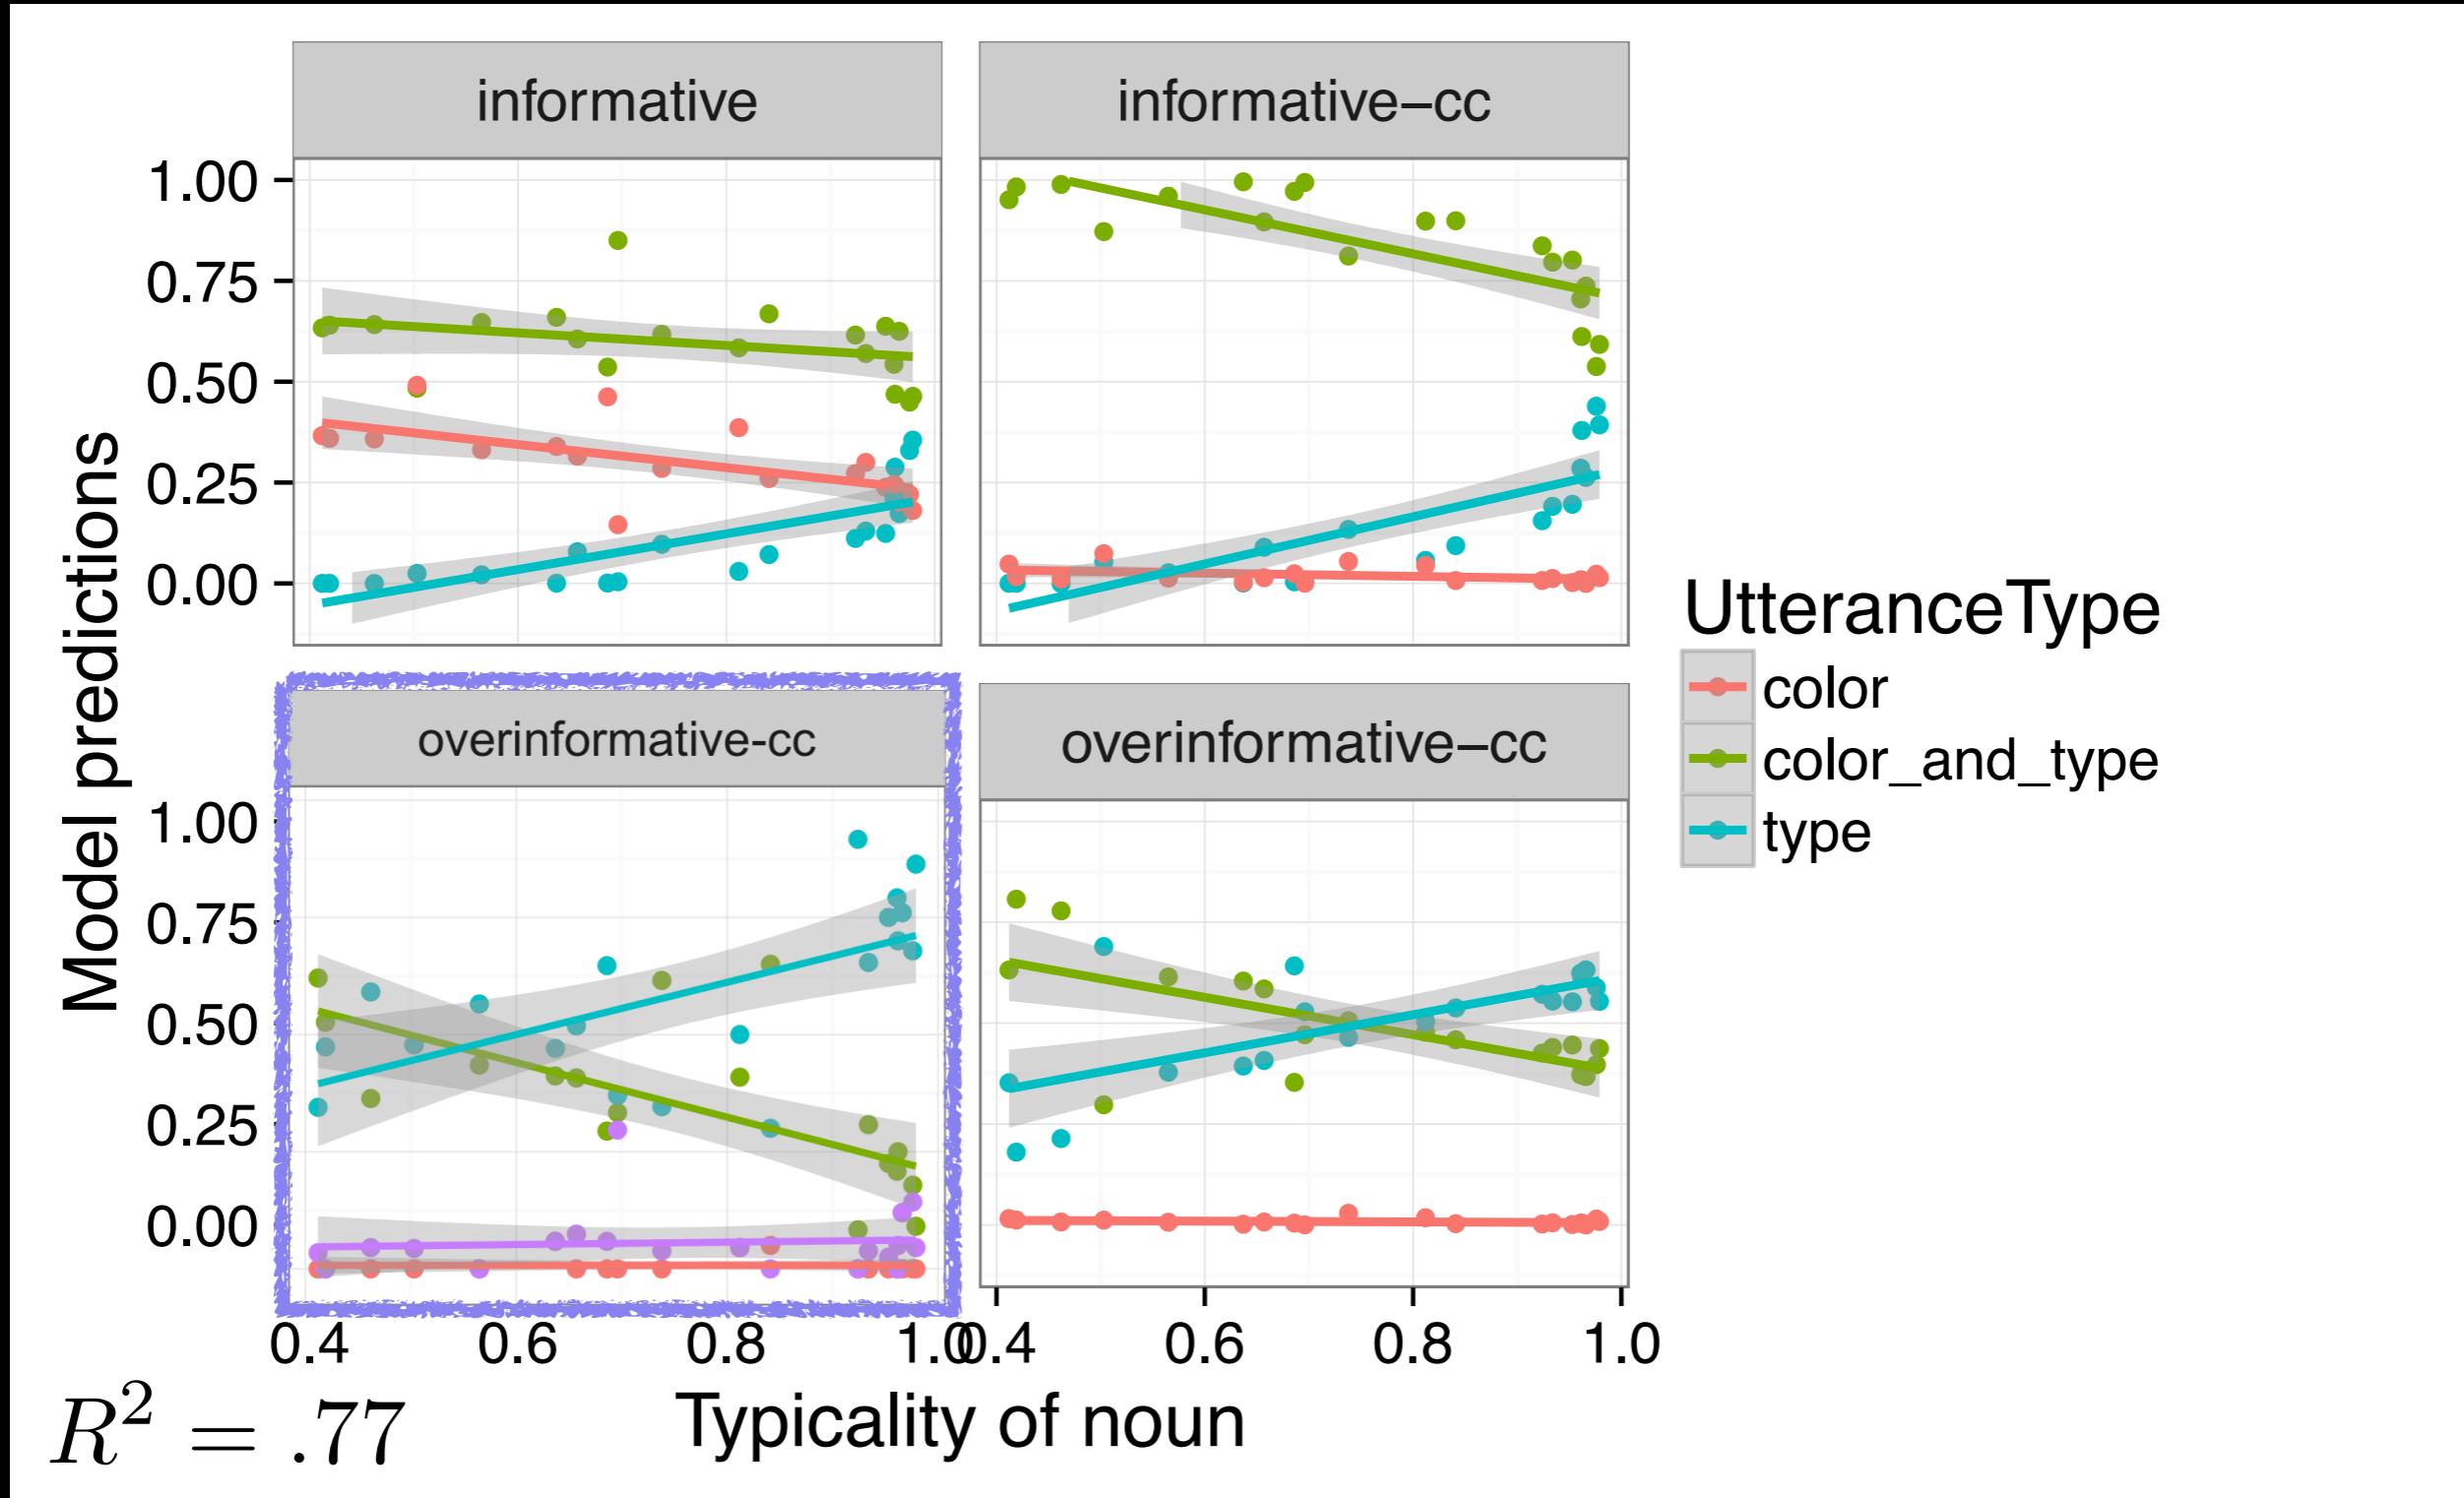

- color
- color-and-type
- type
- other

"blue banana"
"brown banana"
"yellow banana"
1. replication
of Westerbeek
et al 2015

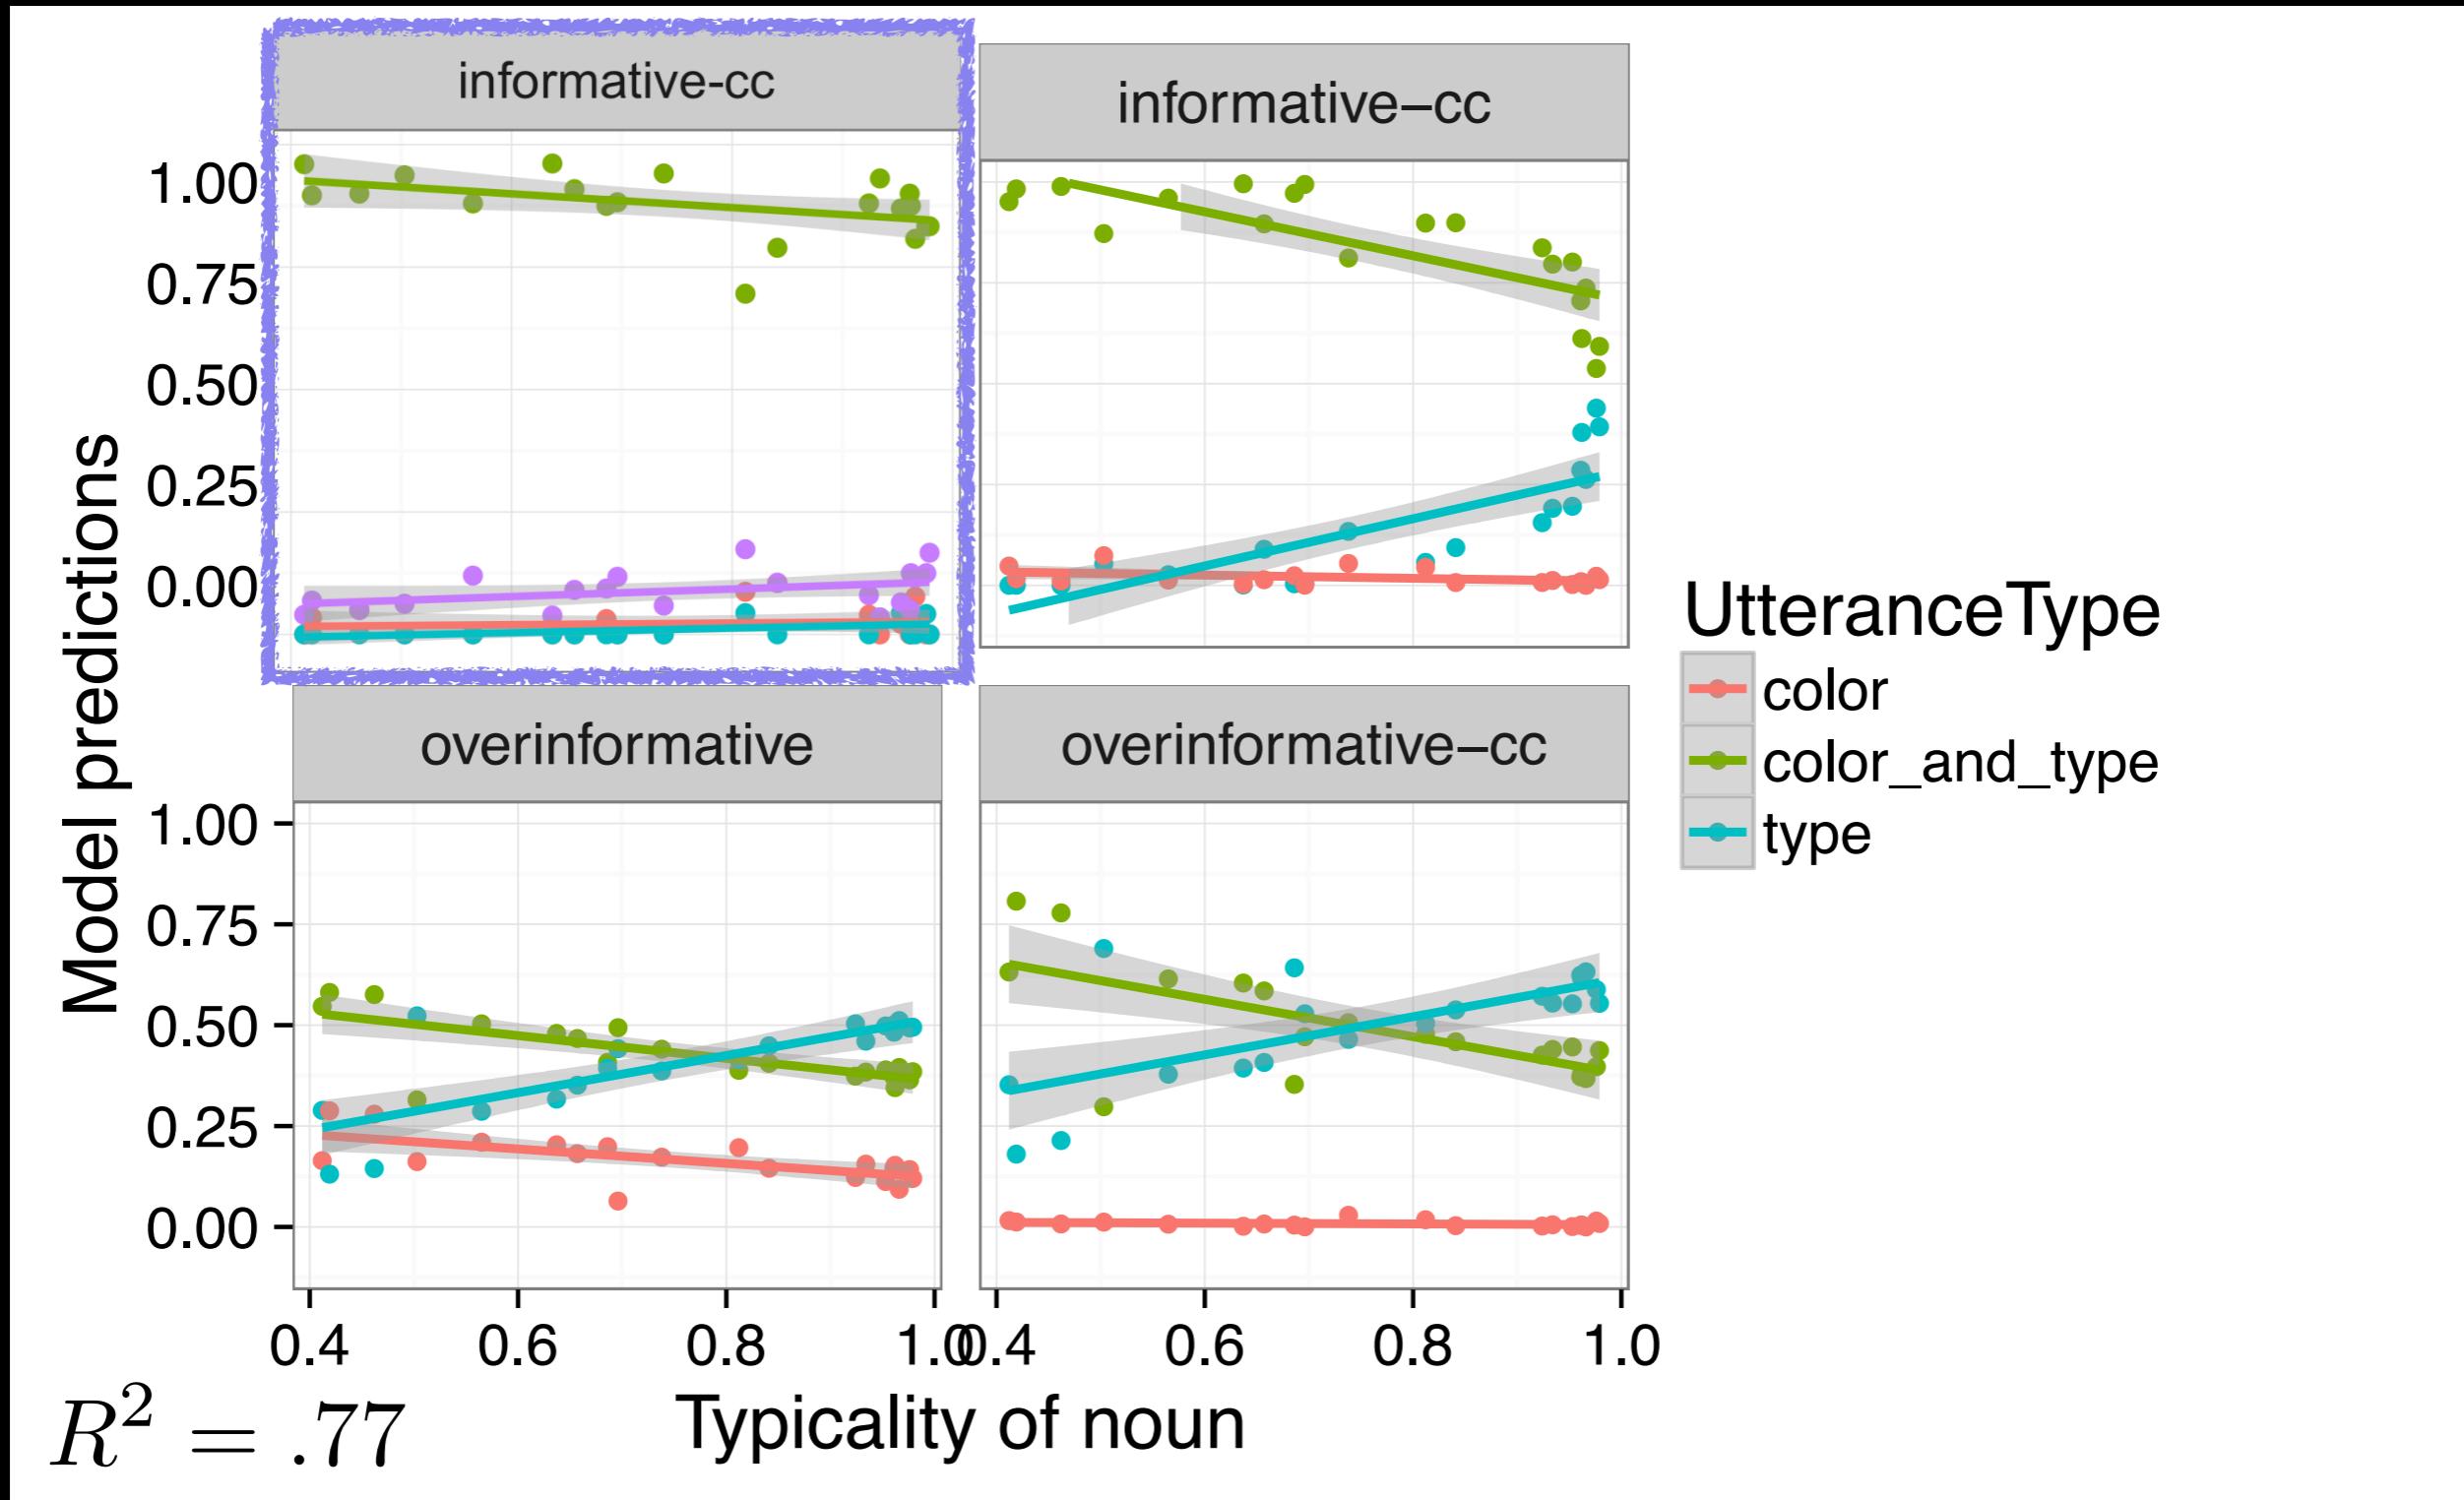

Model evaluation

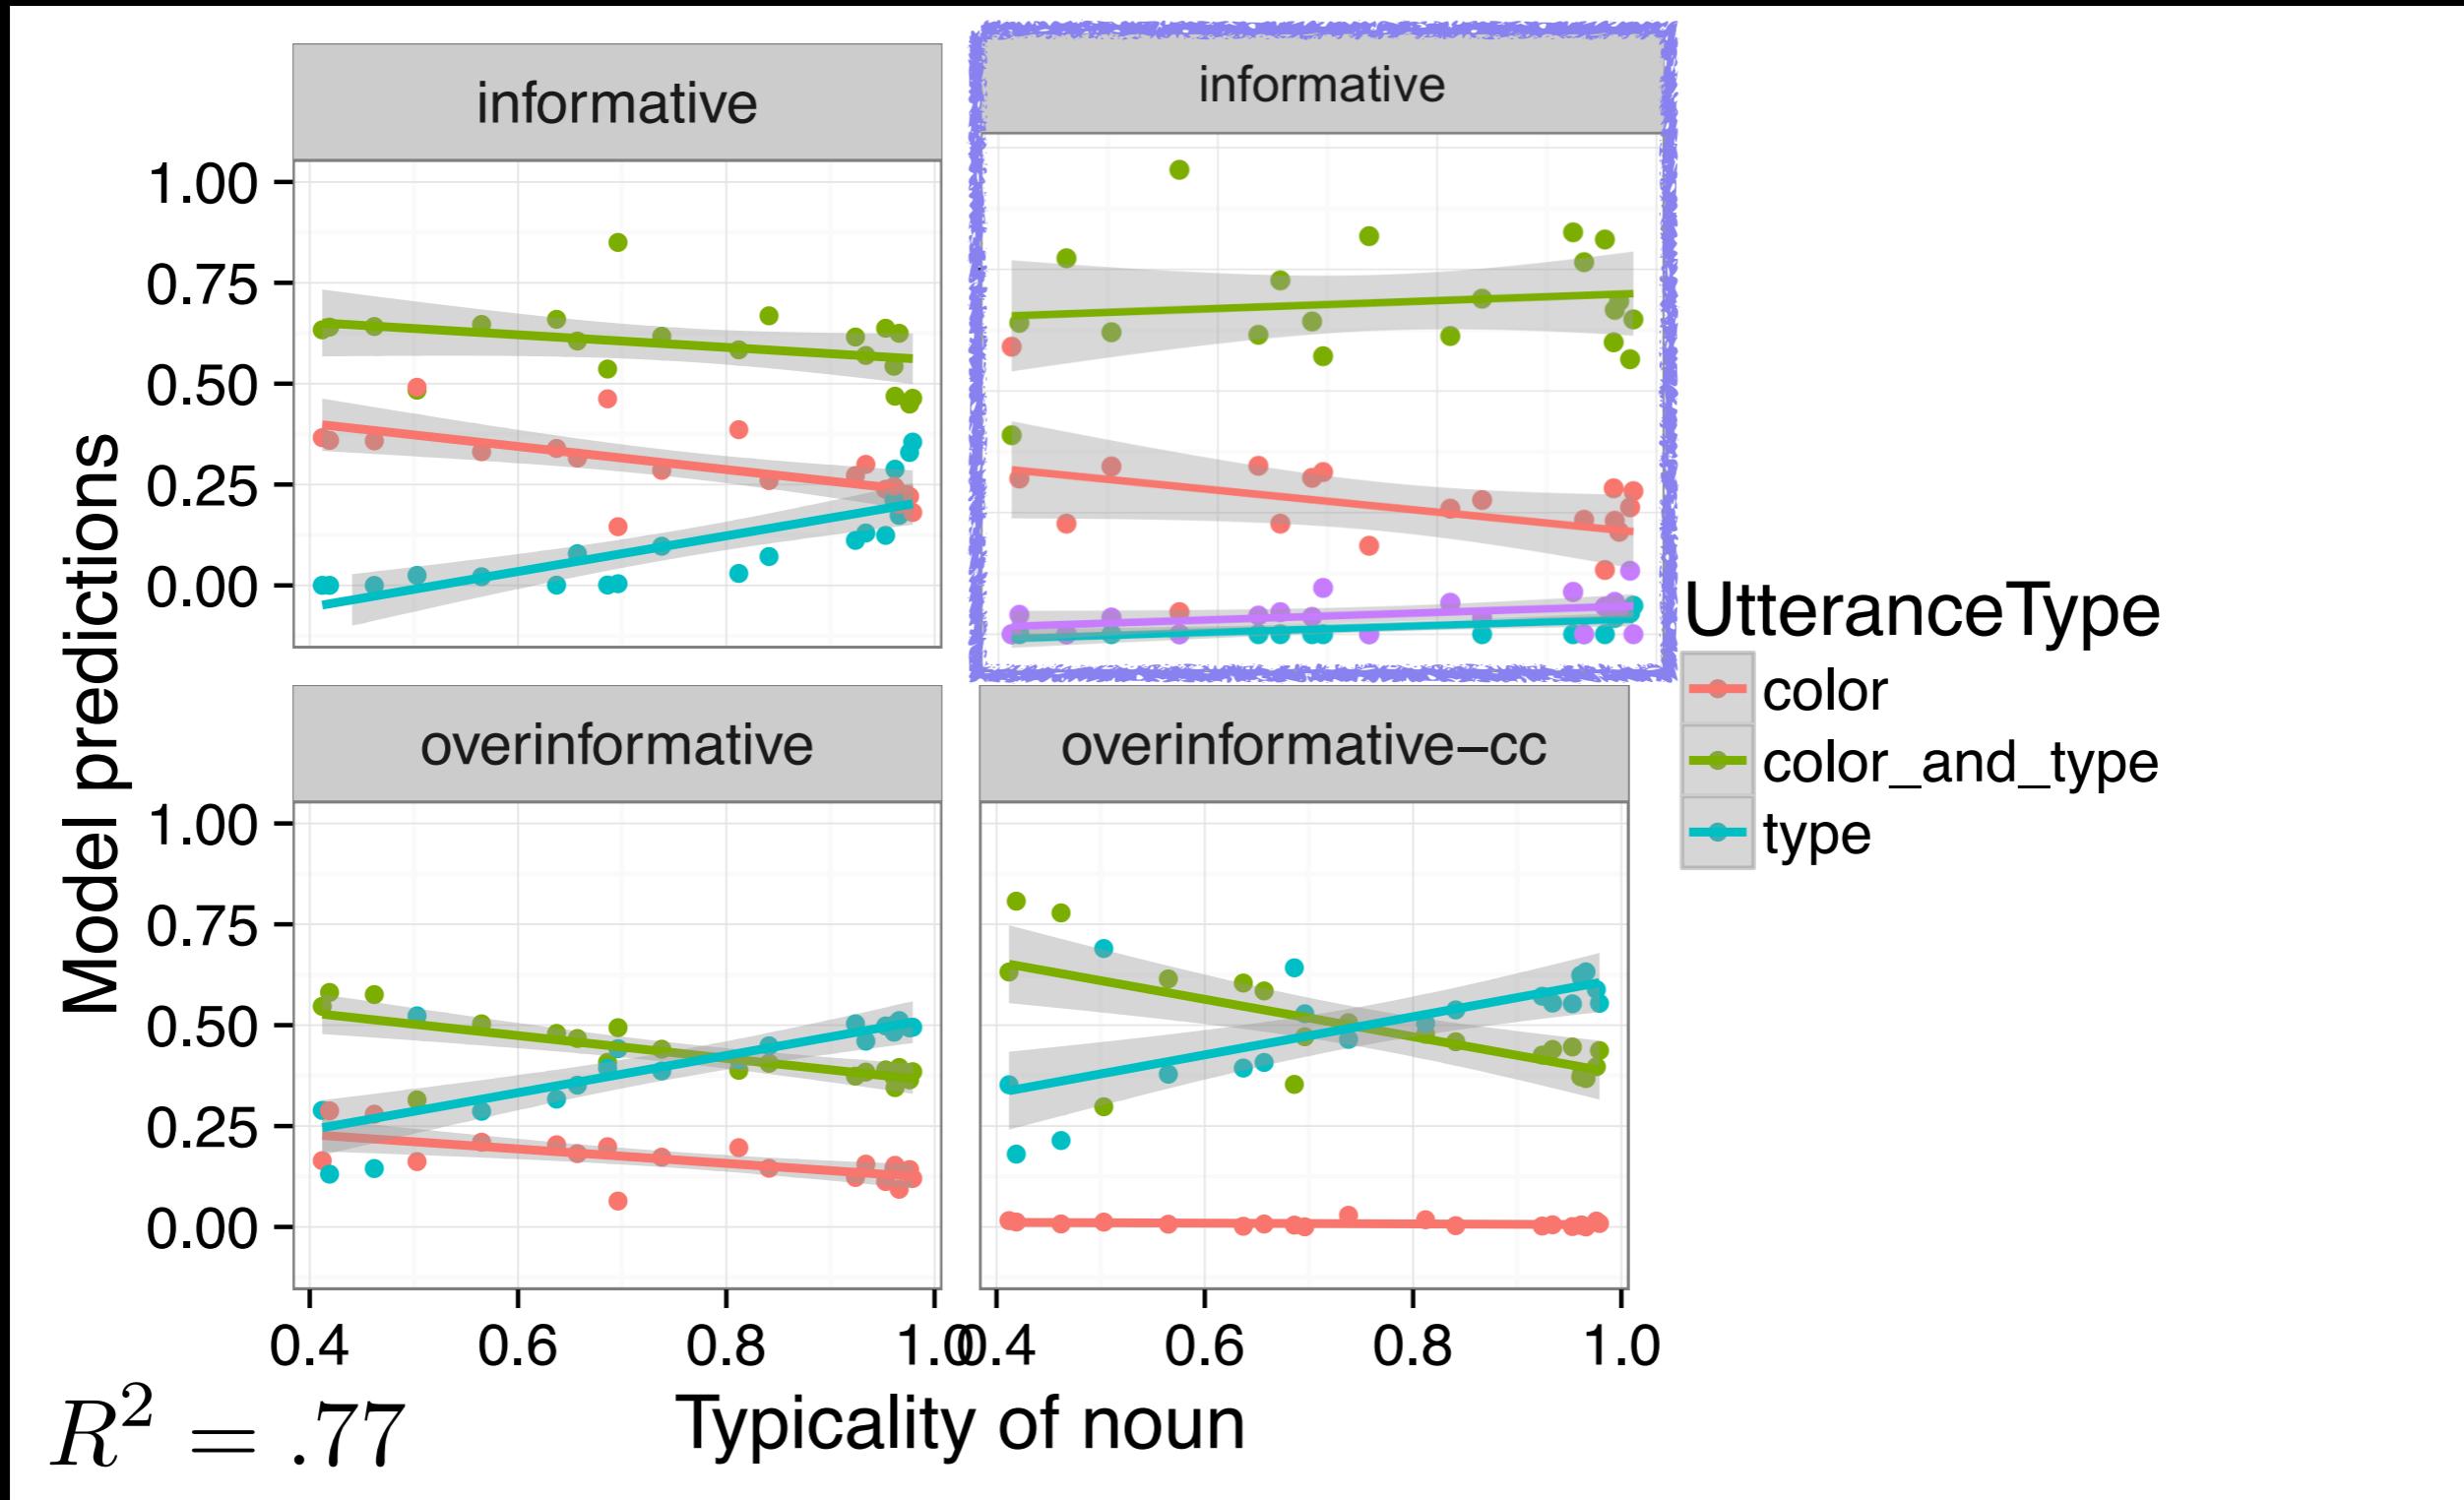

Model evaluation

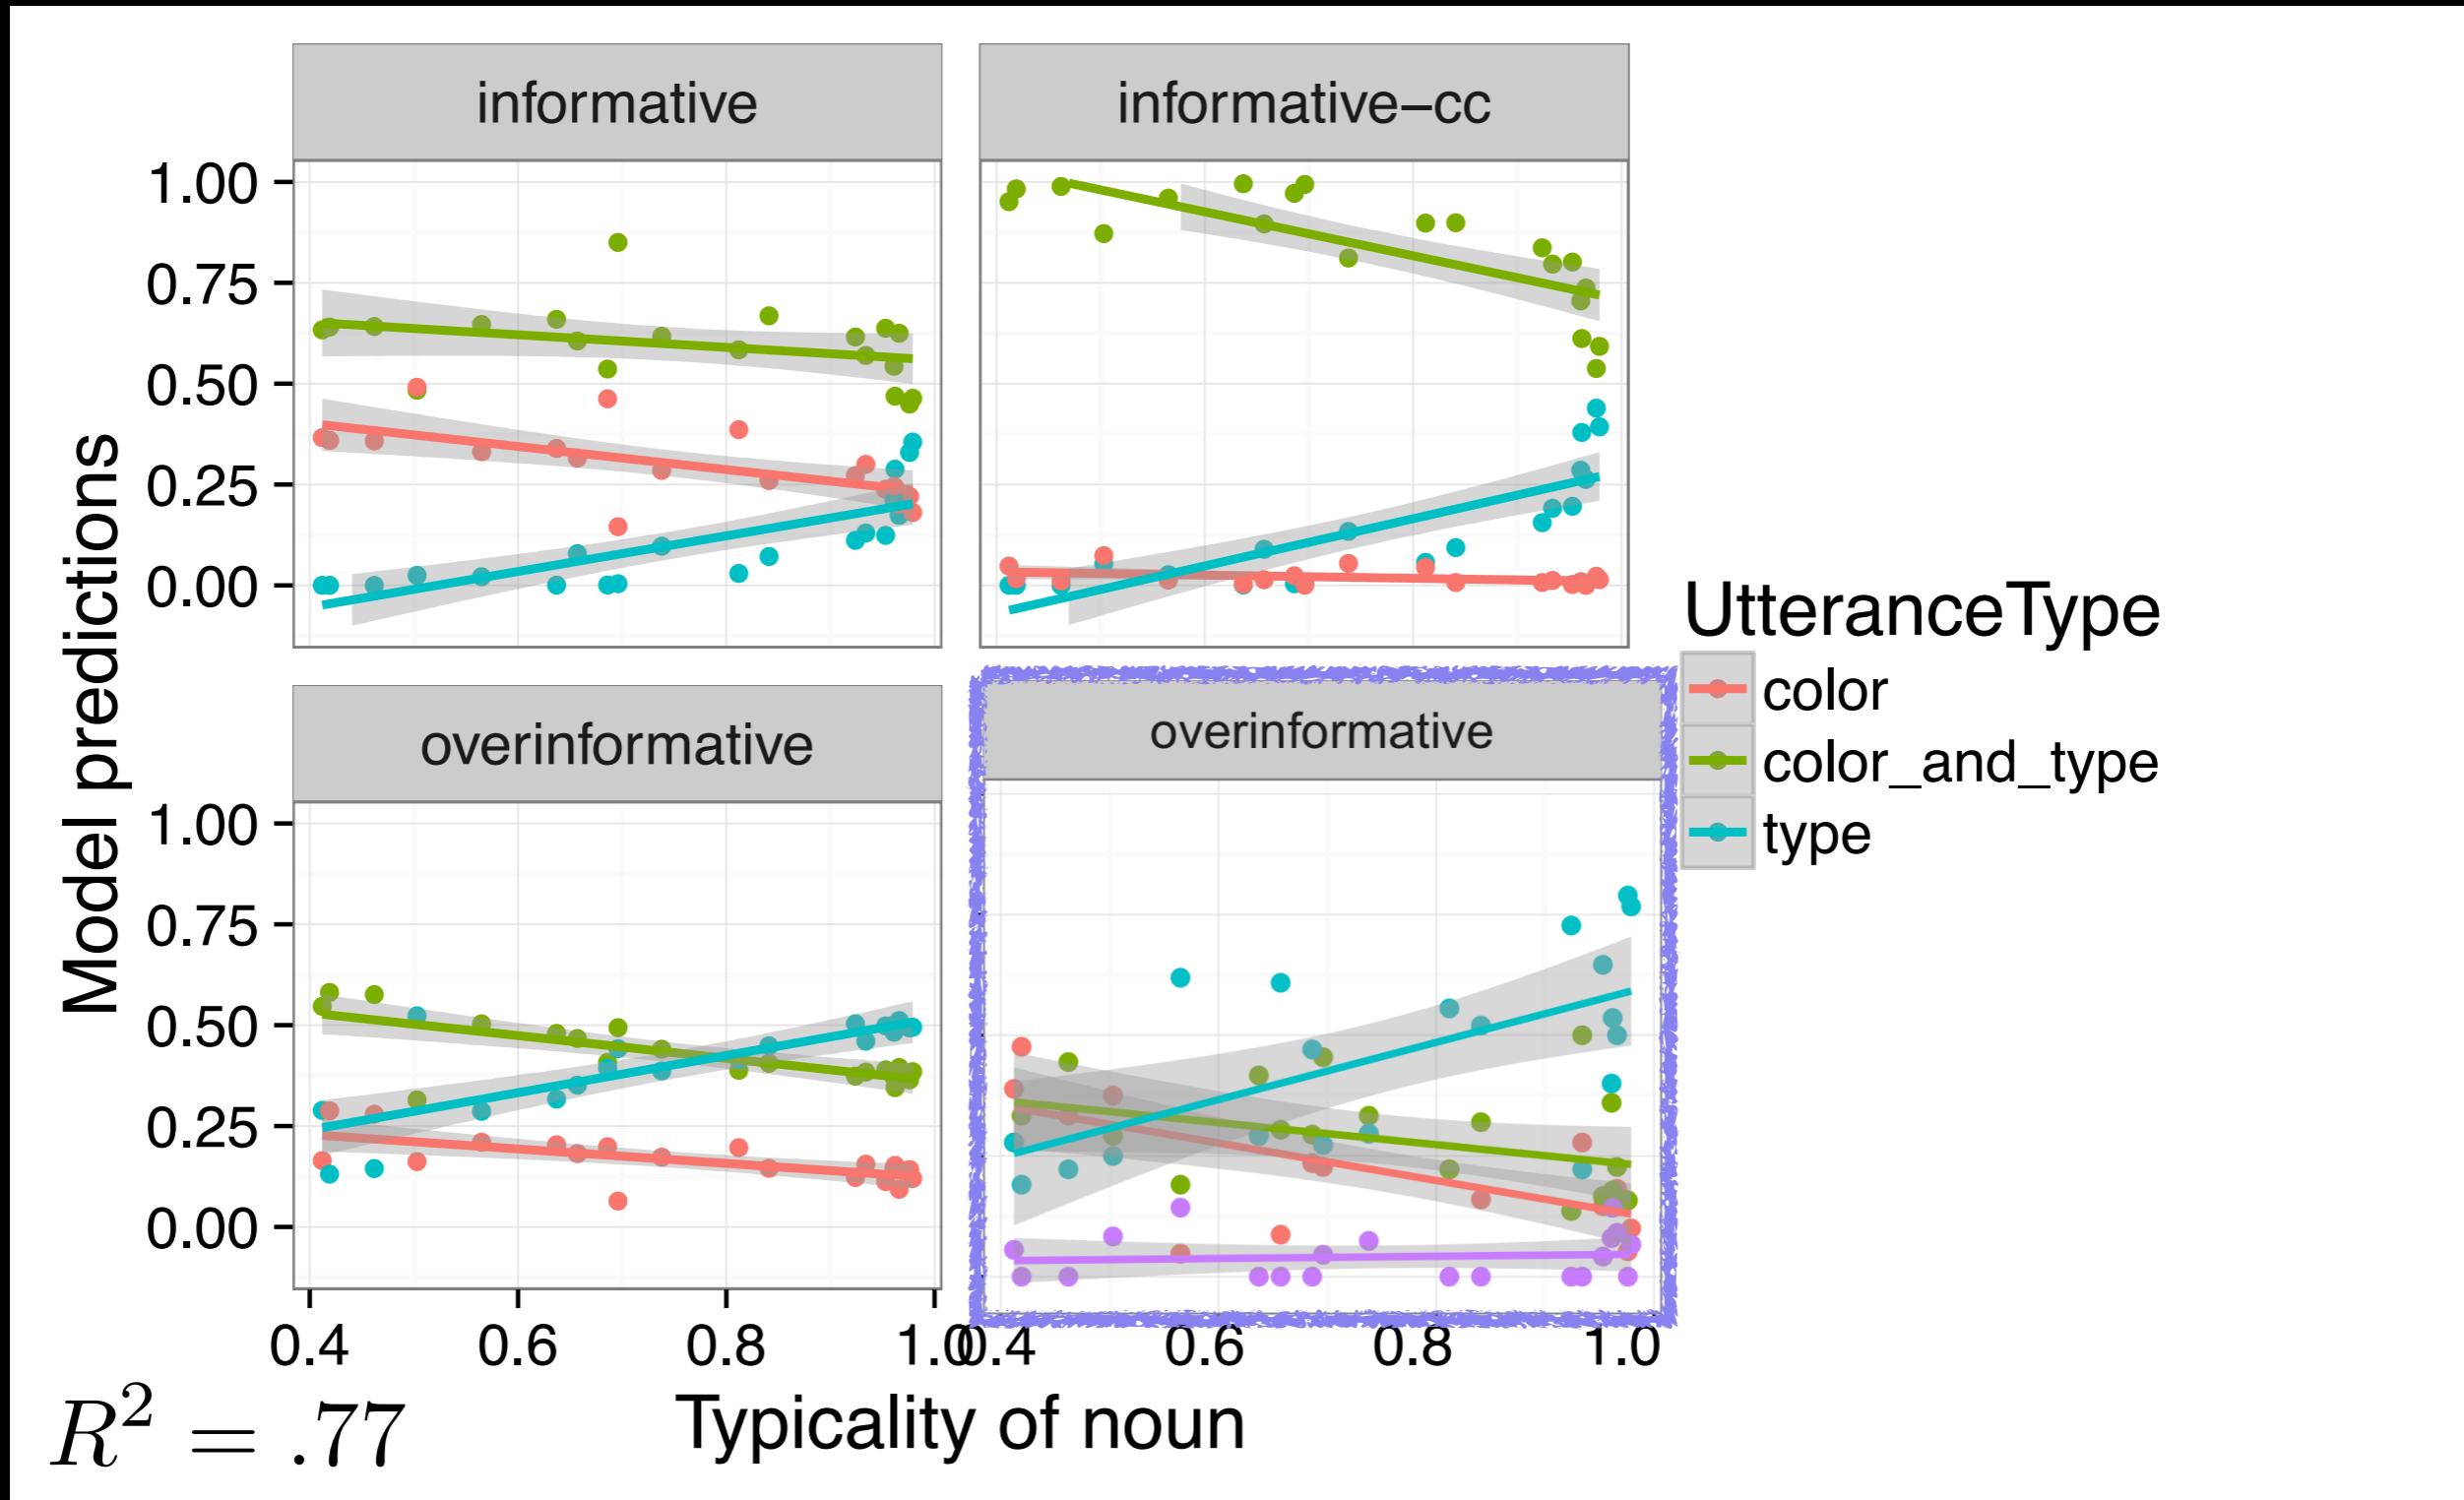

Model evaluation

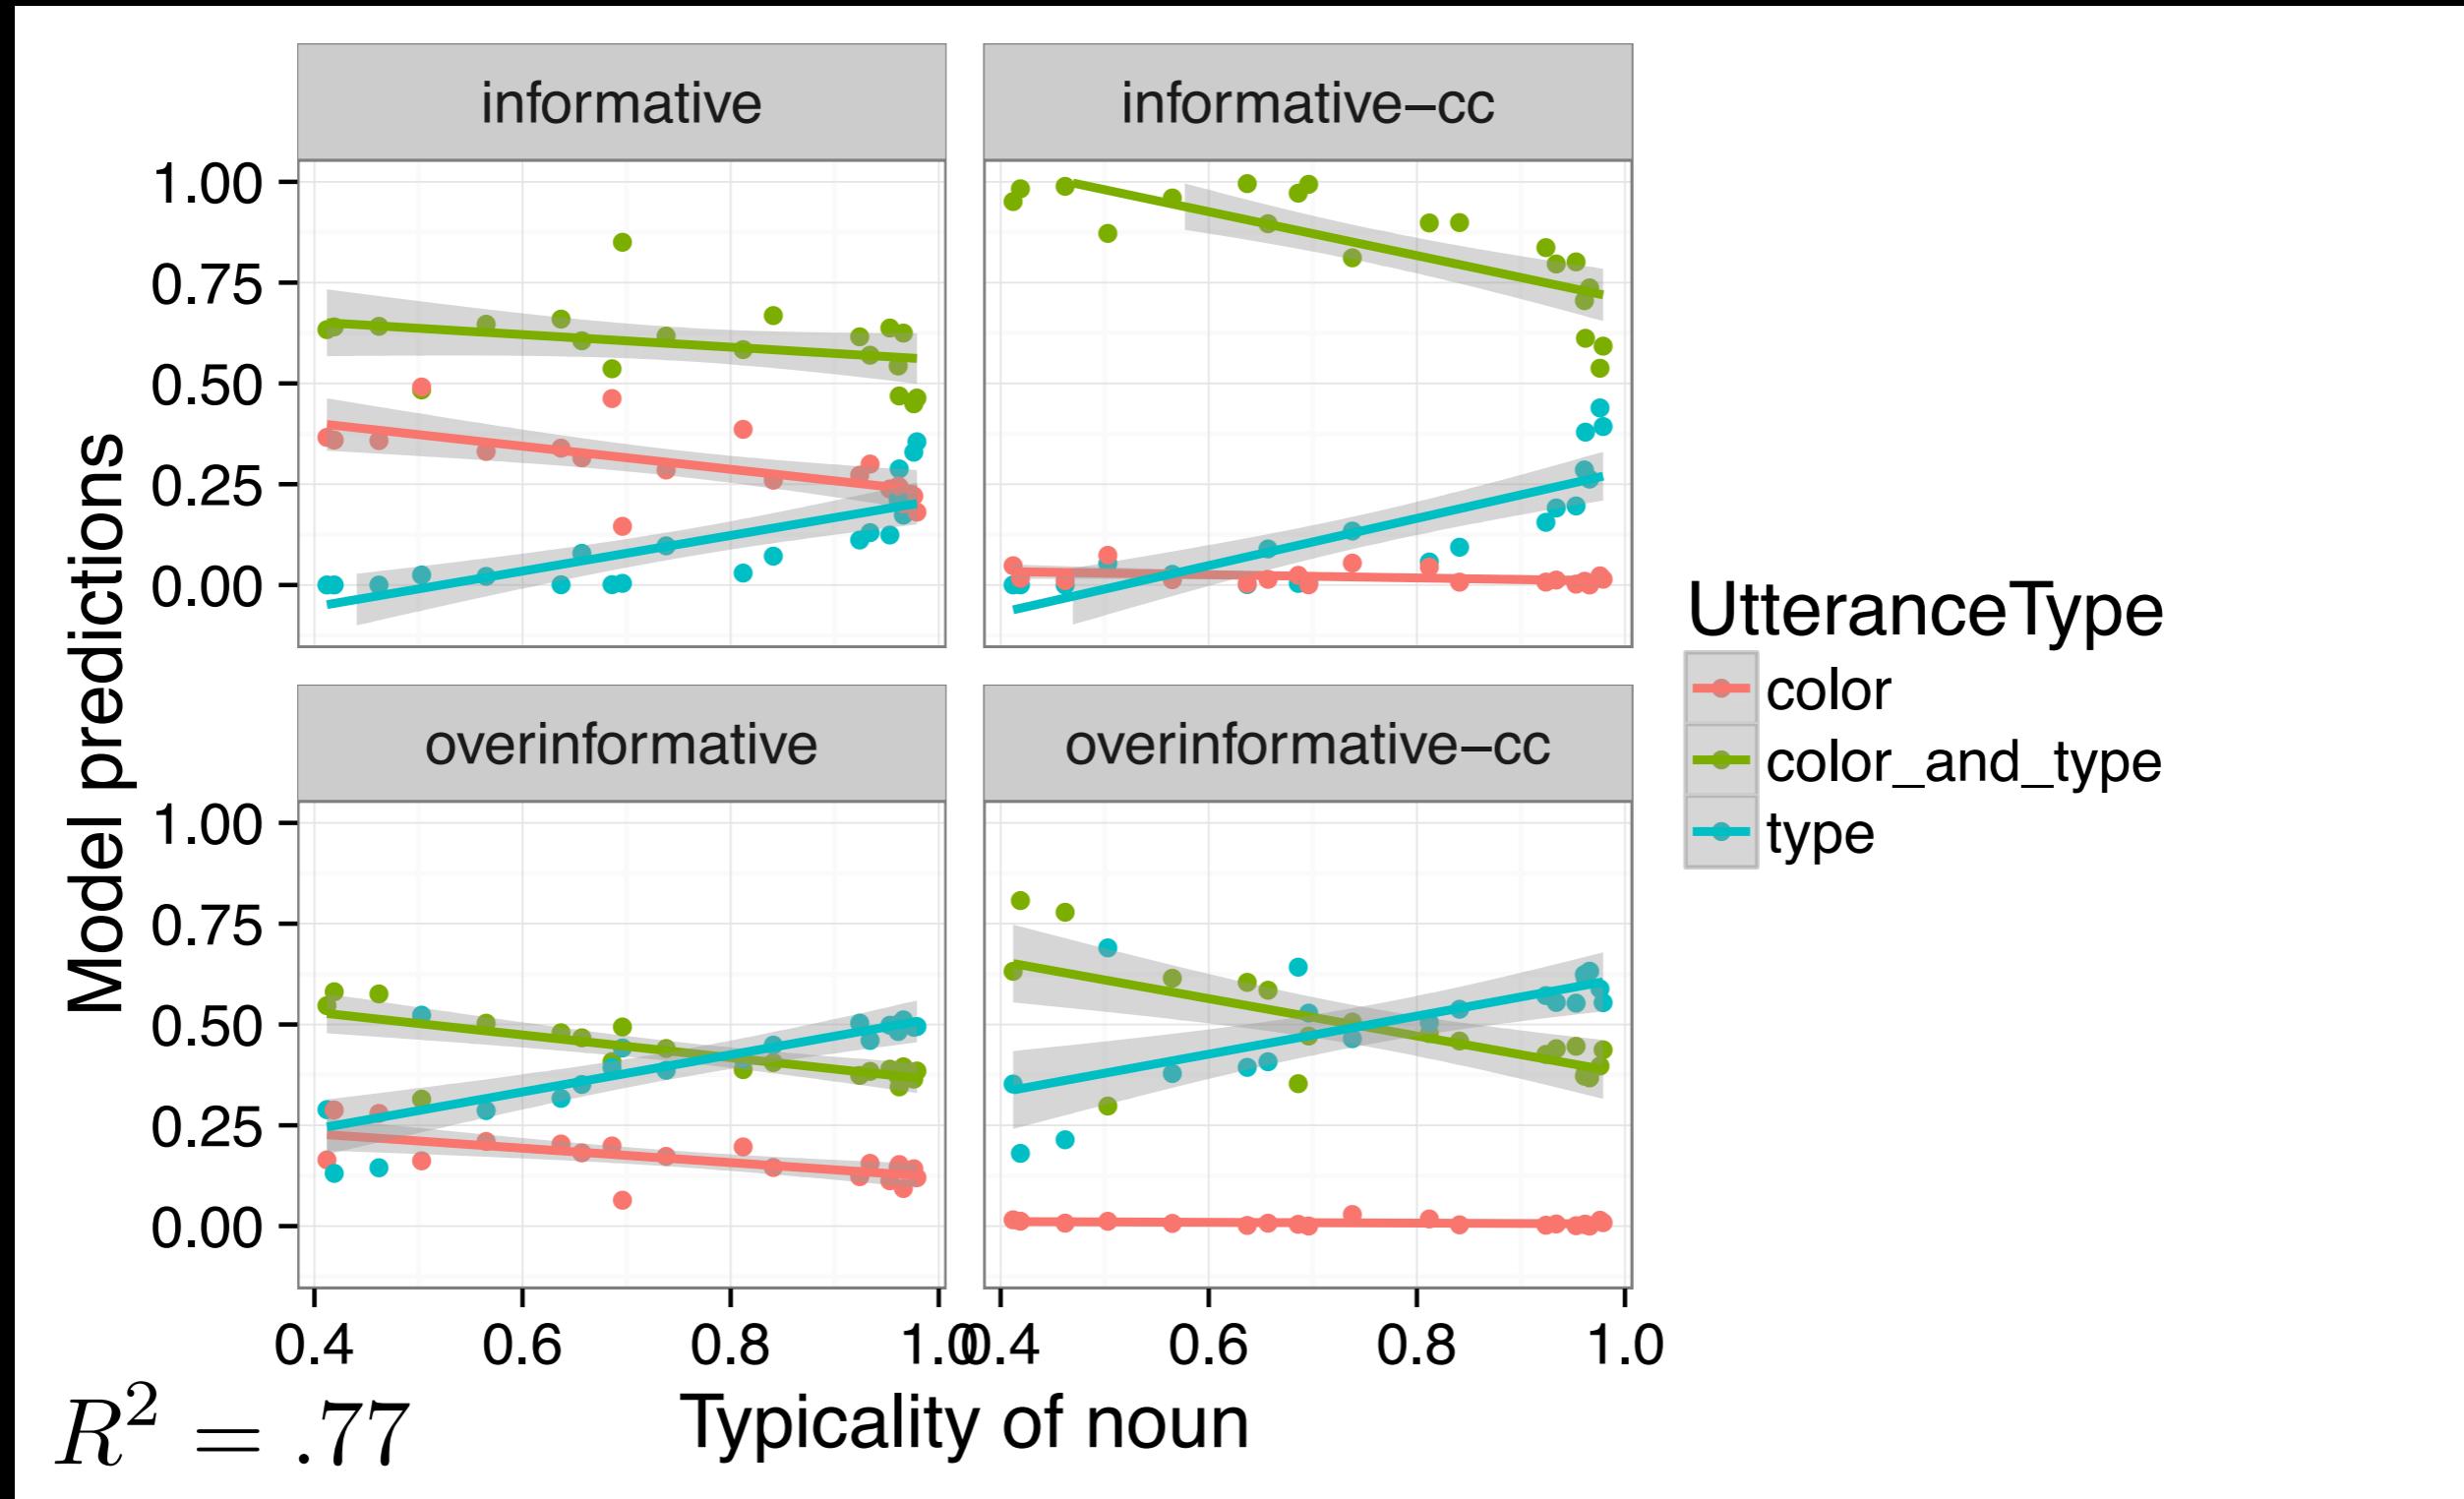

Model evaluation

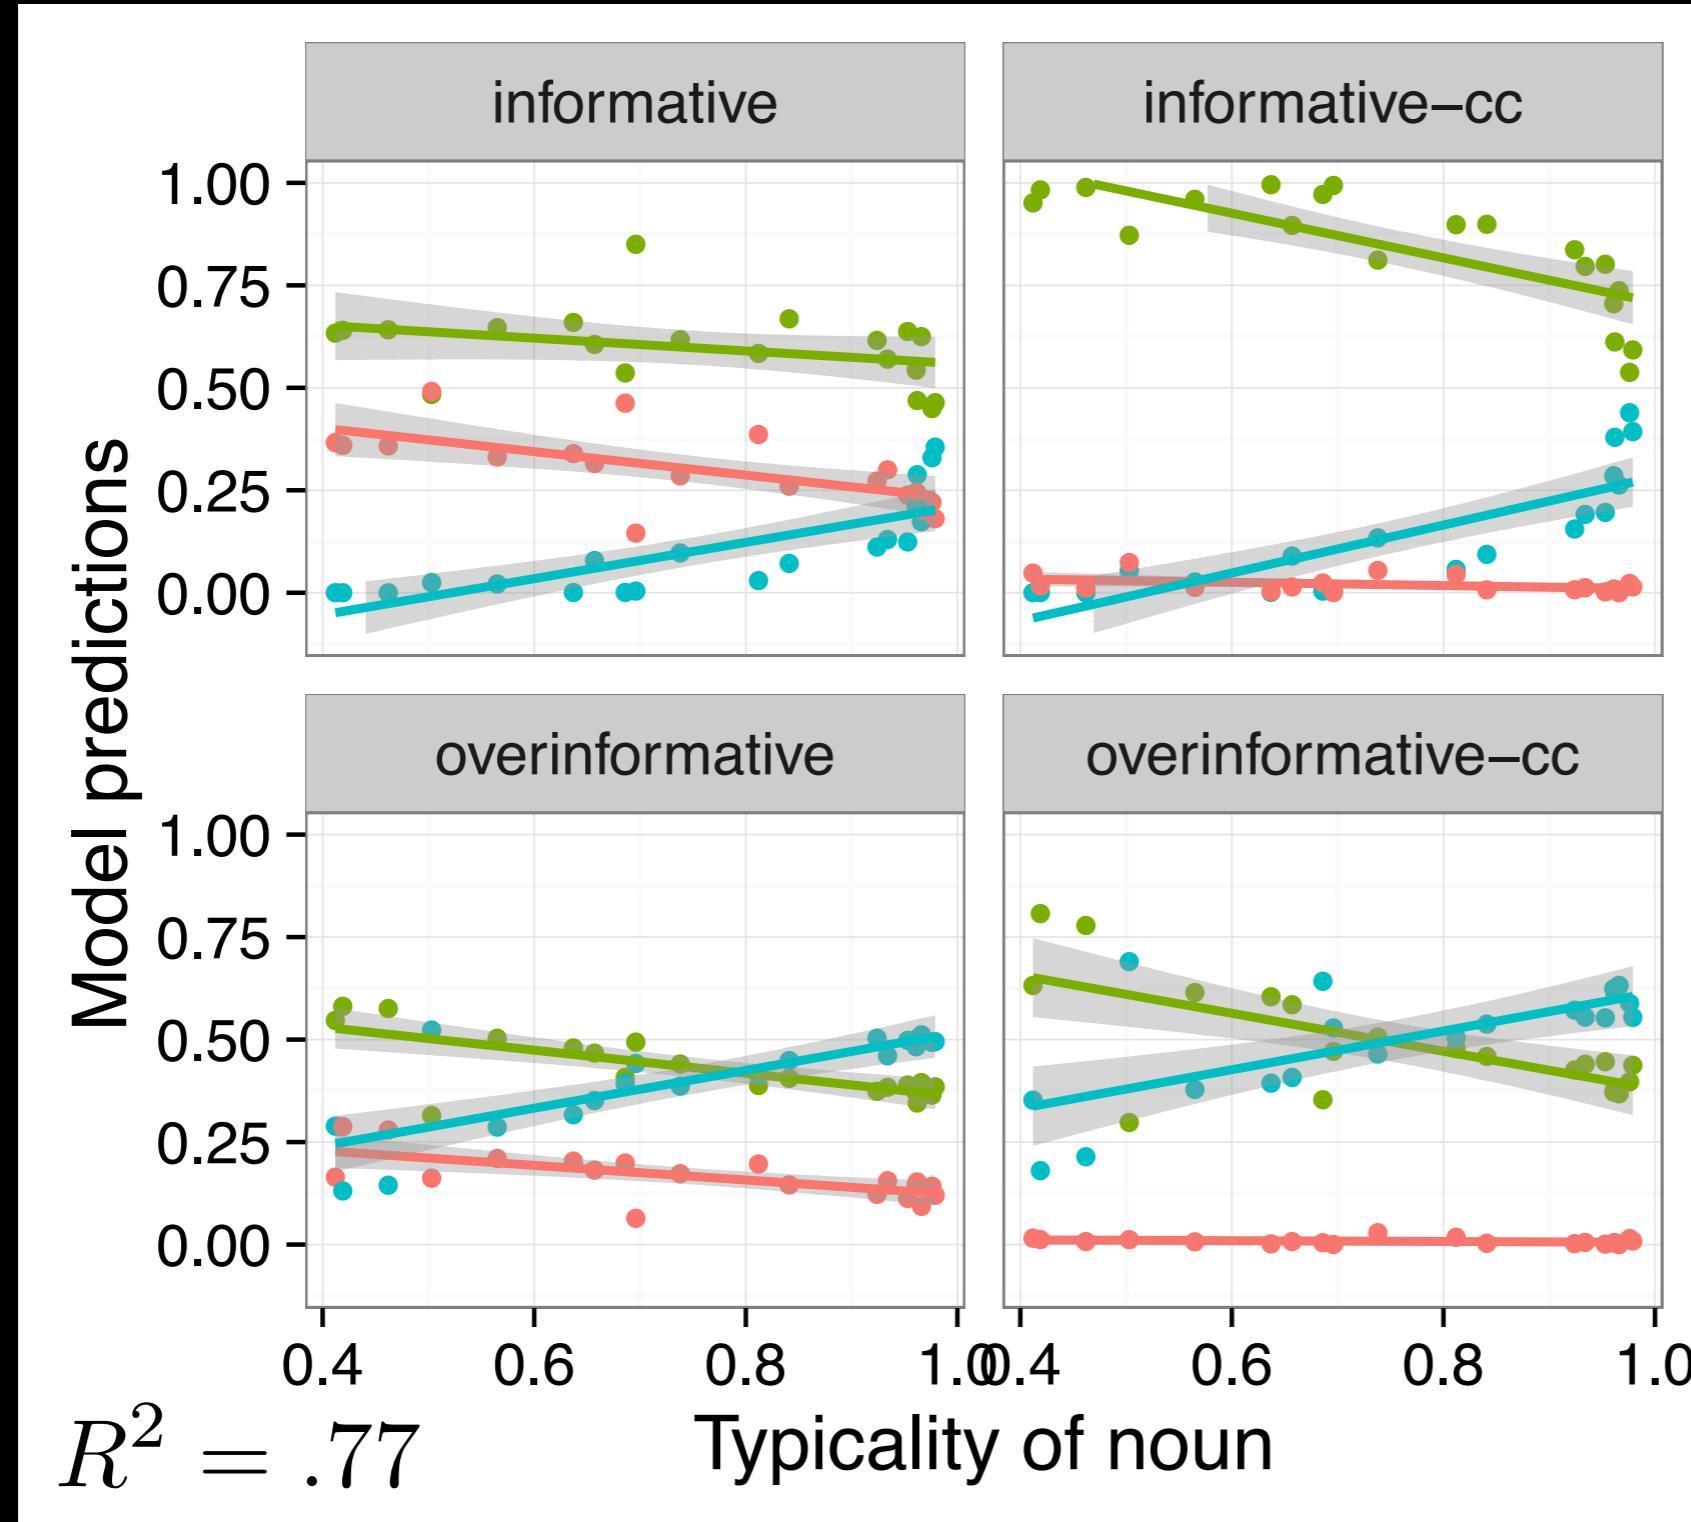

Model evaluation

Model evaluation

Model evaluation

1. model captures qualitative patterns

UtteranceType

- color
- color_and_type
- type

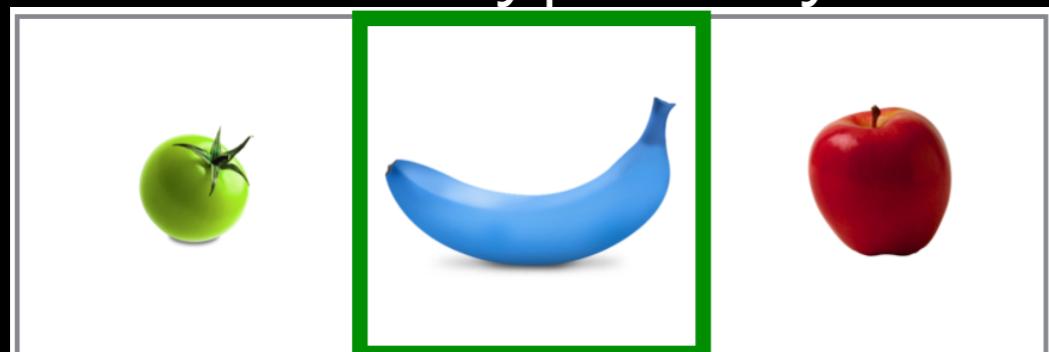

2. mostly captures quantitative patterns but overpredicts type mention

Summary & Conclusion

Speakers redundantly mention features when confusability of intention otherwise high

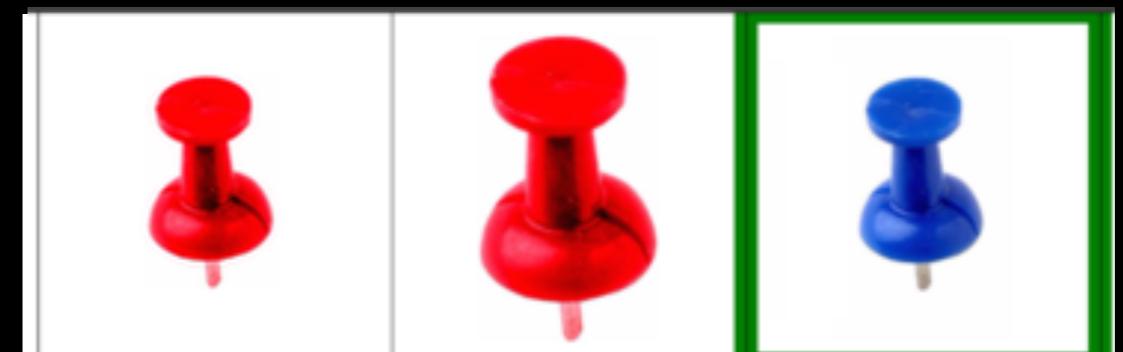

RSA with continuous semantics captures this

color typicality

Kreiss et al 2016

modifier choice

Degen et al in prep

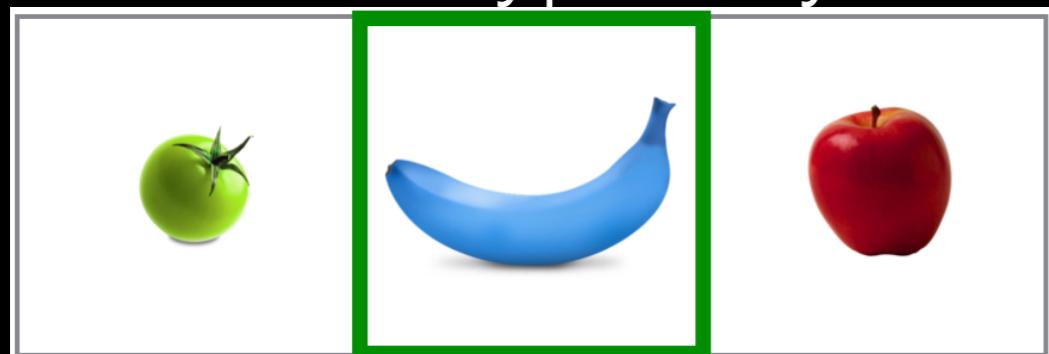

Summary & Conclusion

Speakers redundantly mention features when confusability of intention otherwise high

RSA with continuous semantics captures this

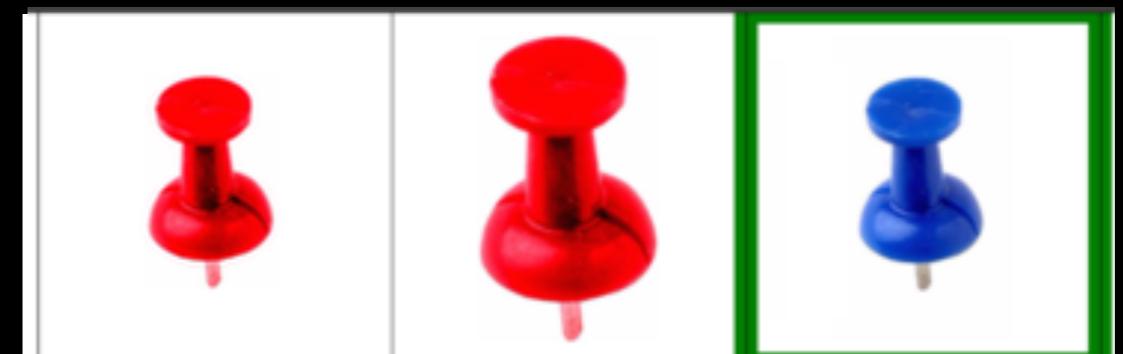

overinformative referring expressions

color typicality

Kreiss et al 2016

modifier choice

Degen et al in prep

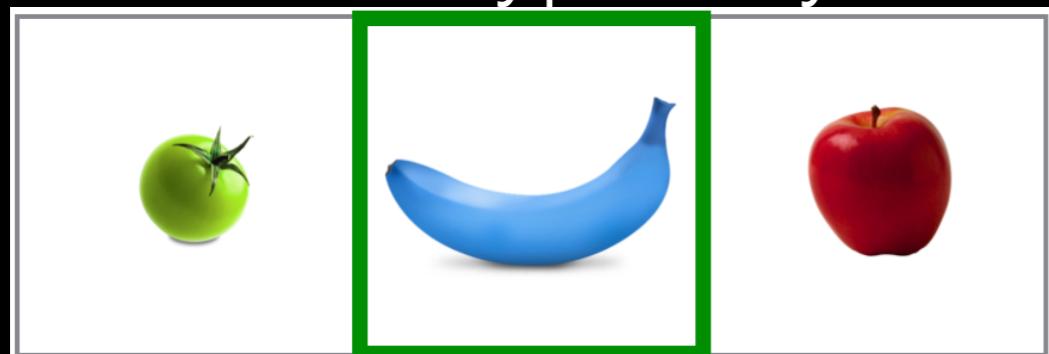

Summary & Conclusion

Speakers redundantly mention features when confusability of intention otherwise high

RSA with continuous semantics captures this

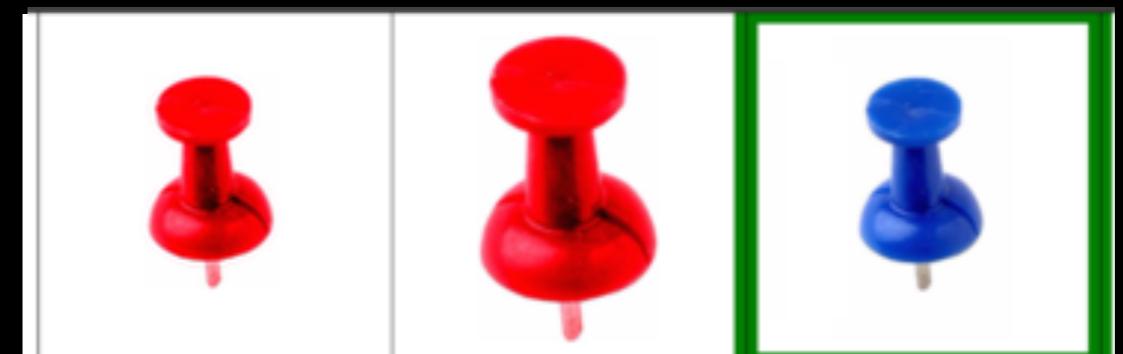

~~overinformative referring expressions~~

color typicality

Kreiss et al 2016

modifier choice

Degen et al in prep

Summary & Conclusion

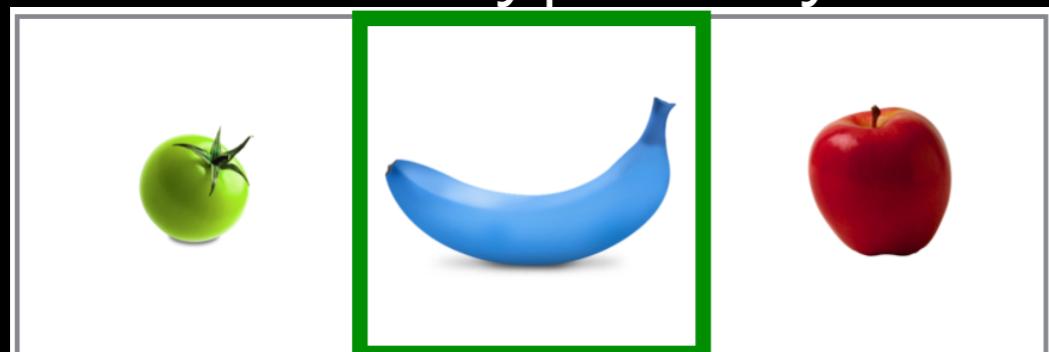

Speakers redundantly mention features when confusability of intention otherwise high

RSA with continuous semantics captures this

~~overinformative referring expressions~~

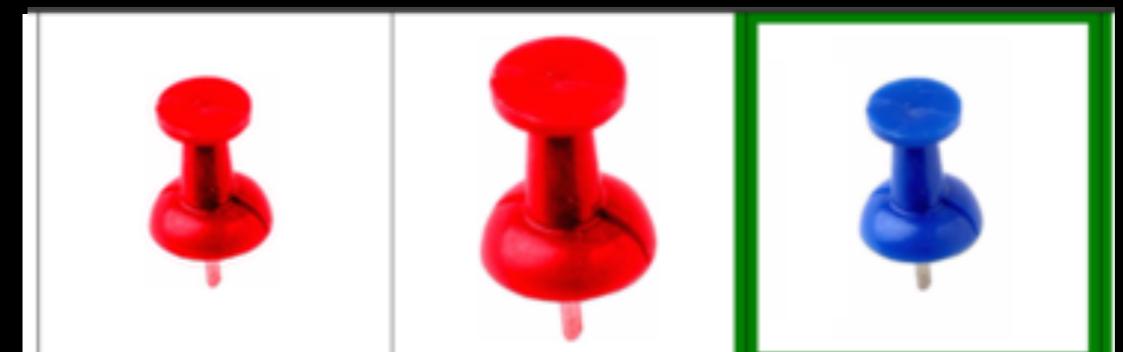

rationally redundant referring expressions

color typicality

Kreiss et al 2016

modifier choice

Degen et al in prep
